A GLOWING REPORT.

AN INDIANA MAN COMPARES WESTERN CANADA WITH THE UNITED STATES.

What Mr. Frank Fisher, a Prominent Dunkard, Has to Say After a Trip Through Canada.

The Department of the Interior at Ottawa has just received from Mr. E. T. Holmes, the agent of the government stationed at Indianapolis, Ind., the following letter, which requires no comment. It is only necessary to state that Mr. F. Fisher, the writer of the letter is one of the most prominent of the Dunkards and a man upon whose word the utmost reliance can be placed. His home is at Mexico, Ind., and he will be pleased to substantiate verbally or in any other way all that he says in his letter.

Anyone desiring information apply to nearest Canadian agent, whose address appears below.

M. V. M. ... Elwood, Ind.

James Stephen ... Marion, Mich.

... and there, thereby covering a hundred and sixty acres.

I have no doubt but that this country excels as a grazing or ranching country, because they have such rich grass, having an abundance of rain to keep it fresh. They also have plenty of water streams and add a rule water may be reached at a depth of from 20 to 40 feet. From this you can see there are plenty of hay meadows for winter feeding. I have had reliable farmers to tell me that their stock will live on hay alone, and be ready for market in the spring. Upon inquiring about the expense of raising a steer, a farmer replied that he did not feel like doing it. I say more than this. First-class farmers were offered land free.

... Mr. Fisher ...

... Canada.

We visited the Territories, Alberta, Saskatchewan and Manitoba. We found the country in the best condition for farming we have seen in the Western States. We saw no failures, but plenty of success. We saw fall plowing done with gang plows, and the farmers were sowing fall rye. We also saw fall wheat that looked very fine. We also saw some very fine winter wheat, oats, barley and other cereals, which could not be surpassed by any attempt to raise them in early varieties in this country. The soil is too rich to be injured by not turning sod over. From the point of fertility, I believe it will last as long as any farming land in the world. It has never been farmed long enough to know how long it will last. The farmers there do not know what it means to manure land. They have never had to do it. They have never had their land tested by any other way than by the plow. It has never had a chance to become hard. It has never been farmed long enough to know how it will act when it does become hard. It has never been tested by any other way than by the plow. It has never been tested by any other way than by the plow. It has never been tested by any other way than by the plow
