SCIENTIFIC CIRCLES.

LATEST DEVELOPMENTS IN INDUSTRIAL FIELDS.

A Simple and Inexpensive Portable Fire Escape—An Optical Illusion—Another Wafer Bicycle—Notes of Progress in Many Lands.

SIMPLE and inexpensive portable fire-escape, which may be packed in small compass to take but little room in a traveler's trunk or bag, is shown in the accompanying illustration. It consists of a clamp adapted to slide upon a rope, as shown in the small figure, the clamping or frictional pressure upon the rope being readily controlled by the person using the device.

The two hinged parts of the clamp are provided with registering half grooves adapted for convenient use on different sizes of rope, and the clamp is held in gripping position upon the rope by a threaded locking lever on the outer end of which is a finger wheel. At the top and bottom of the clamps are rings through which the rope passes, affording a slight frictional brake, and at the bottom is also a double hook to which may be attached body and shoulder straps to support one making use of the device in escaping from a building.

When the escape is permanently fixed to houses or factories, the rope is preferably attached to a hinged arm secured at the inside of the window casing. The device may also be secured to the window casing. When several persons are in one room the frictional pressure of the clamp may be controlled by one standing in the room to let down different individuals in turn, the looped end of the rope being conveniently secured to straps by which the person is suspended, and the rope sliding through the clamp. As one person reaches the ground, it is ready for another to descend.

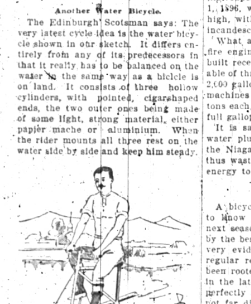
Each apparatus is tested to 1,000 pounds, and the whole device is designed to be so simple and safe in its mode of operation that there shall be no reasonable possibility of a person failing to make it work properly in an emergency. This apparatus may also be conveniently employed by painters, chimney sweeps, electricians, and by all engaged in work necessitating their being suspended outside buildings.

Color Cells or Chromatophores.

The controversy, written and conversational, on the subject of the exact means by which the various colors in the animal world are produced is by no any way decreasing, even though with all their researches scientists have failed to satisfy either themselves or the public as to the precise origin and function of the cells in which are contained color-giving properties. It is said that although the chromatophore is a cell, whose essential function is one of color-giving, it seems that all color-giving cells are not necessarily chromatophores. Thus the cells of the sensory, respiratory and excretory tissues are pigmented, but their pigmentation, accidental or, more strictly speaking, not essential. The cells that give the reddish hue to the tissue of the lips and nostrils are not chromatophores. These primary functions are the one of coloration, but that of the chromatophore is. The cause of color in the plumage of birds and in the coats of animals of various sorts has long been the subject of discussion among scientists, and even with all of our facilities for investigation we are quite far from having arrived at the true solution of this one of the entertaining mysteries of nature.

Another Water Bicycle.

The Edinburgh Scotsman says: The very latest cycle idea is the water bicycle shown in our sketch. It differs entirely from any of its predecessors in that it really has to be balanced on the water as the rider would on a bicycle on land. It consists of three hollow cylinders, with pointed, cigarshaped ends, the two outer ones being made of some light, strong material, either papier mache or aluminium, on which the rider mounts all three rest on the water side by side and keep him steady.



He works the pedals in the same way as a cyclist and thus turns a screw that propels the machine. When properly balanced he lifts by a spring the two outer cylinders and the machine glides along, balanced on the center cylinder, which is of galvanized iron or, of copper plates. To stop he has only to let down the side cylinders on to the water, and to turn rudder, which is below the center cylinder, which offers sufficient resistance to pull him up. There is a steering gear, and the inventor is quite satisfied with its performances, which, we presume, has been confined to smooth water.

A Removable Steel Head.

A sectional and removable barrel head has been patented by Hiram M. Dillinger, of Paradise, Pa. To open a barrel or keg having this head all that is necessary to do is to draw apart the opposes the central wedge section, which opens a space sufficient to allow the two sides or half-heads to be moved laterally out of the chimes and lifted out. The head can be easily removed to examine the contents of the barrel, and as easily replaced an indefinite number of times, thus removing a large item of expense in the re-use of the package.

Curious Photographic Experiment.

A curious experiment in photography was recently made in England. A man was made to look steadily at a postage stamp on a black card for a minute, the room was then darkened, a sensitive photographic plate put in place of the card, and the man looked at it steadily for, twenty minutes. The plate was developed and showed two distinct images of the stamp. Ingles Rogers, one of the three witnesses of this feat, he unable to decide whether the photograph is one of the image projected on the man's retina or whether it is a case of thought transference.

Gigantic Electric Light.

An electric light of 1,000,000 candle power will soon shed its warming rays from the top of Navesink Highlands, on the New Jersey coast. It will be the strongest light of any seacoast in the world. It was exhibited at the World's Fair at Chicago, and was purchased by the government. The present light is 165 feet above the level of the sea, and can be seen, under ordinary circumstances, nineteen nautical miles. The new light will, it is expected, be seen not only a great deal farther, but, by reason of its great strength, will be able to penetrate haze and fogs, and thus warn mariners that they are approaching a dangerous coast.

Silvering Mirrors.

A curious method of silvering mirrors has recently been patented by Mr. Hans Boas of Kiel, says London Engineering. It is based on the fact that when one of the heavy metals forms the cathode of a vacuum tube, containing a trace of hydrogen, this metal is volatilized by the current, and is deposited as a brilliantly adherent and highly polished layer on the walls of the tube. The mirror thus produced is of much greater brilliancy than is obtained by the more orthodox methods.

Human Hair's Growth.

Authorities differ as to the rate of growth of the human hair, and it would, to be very distasteful to different individuals. The most usually accepted calculation gives six and a half inches per annum. A man's hair, allowed to grow to its extreme length, rarely exceeds twelve or fourteen inches, while that of a woman will grow in rare instances to seventy or seventy-five inches, though the average does not exceed twenty-five or thirty inches.

An Optical Illusion.

To see the spot loudest, hold this drawing straight in front of you, gradually bringing it nearer, until the nose is close to the star at foot.

Rubber Shoe Soles for Soldiers.

The war department is experimenting with rubber heels for shoes. And the tests made by the troops at Fort Davenworth indicate that the rubber heels lessen the jar to the body in marching, and thus add comfort to the wearer. If they are good for soldiers why not for civilians who have much walking to do?

A New Glue.

According to a German authority, a new and excellent glue is made by dissolving gelatine in a solution of chloral hydrate in water. For general purposes ordinary glue may be used instead of the more expensive gelatine. This cement is said to dry quickly, to have great adhesiveness and to remain unchanged indefinitely.

Notes.

The first private carriage lighted by electricity was that of the lord mayor of London twelve years ago.

One of the most interesting things to be seen at Atlanta, Ga., outside of the exhibition, is a house constructed entirely of paper, from foundation to chimney top.

A large cave with many interesting geological features, was discovered by prospectors near Big Meadow, Ore., a few days ago. The cave has been explored for a distance of about four miles. It is proposed to utilize the motive power of the Nile cataracts by establishing electric stations at the falls and transmitting the power to Cairo.

A feature of the Tennessee Centennial exposition, which will open Sept. 1, 1896, will be a steel tower 330 feet high, with a great revolving crown of incandescent lights on top.

What are claimed to be the largest fire engines in the world are the two latest patterns in London. One is capable of throwing 1,440, the other 1,800 to 2,000 gallons of water per minute. The machines weigh three and one-half tons each, and can be readily drawn at full gallop by four horses.

It is said that 300,000 cubic feet of water plunge 150 feet downward over the Niagara escarpment every second, thus wasting 10,000,000 horse power of energy to the second.

Wearing Bloomers.

A bicycle club of girls are anxious to know if bloomers are to be worn next season, and if they are approved by the best authorities. Answer—It's very evident, girls, that you are not regular readers, else you would have been posted and grounded, as it were, in the latest ideas on bloomers. It is perfectly safe to say that the time is not far distant when women will find their cycles available for all uses, and to call the spectacle they have made of themselves by going out wheeling in bloomers. They are merely a craze, and one that is without sense or reason. Thousands of maidens have worn them, and for this they will probably be very thankful. As to the authorities that approve of them, that is a matter of opinion. Many very sensible women wear them, but that proves nothing. The bloomer fad is dying out, and a not very lingering death either. Any moderately short skirts and gaiters, girls, and let bloomers severely alone. One of the best styles is a skirt just to the instep in front and almost touching the ground at the back. When you mount, see that the back seam of the skirt comes exactly over the middle of the saddle. This prevents showing the ankles at the back, and gives a much more graceful and stylish effect than a very short skirt. It is safe and comfortable and becoming, and this cannot be said of all costumes.—New York Ledger.

A Pair of Moses.

They sat together, by the sea,
A brave young group and bright,
And listened long and lovingly
To the moaning of the tide.

Just six months later, when they sat
At home and sadly sighed,
The neighbors in the next-door flat
Heard the moaning of the tied.

Prepared.

Mrs. Hobb—"My husband came home last night and told me he was ruined. Do you know, I think I must have had a premonition of it."

Mrs. Nobbs—"Why?"

Mrs. Hobb—"It was only last week that I ordered a complete new wardrobe."

Unimportant.

Clara—"He asked me to go to the theater to-night and I am in a terrible dilemma to decide what to wear."

Maud—"Is that so? What are you going to see?"

Clara—"I didn't agree."

—New York Weekly.

UNTOLD MISERY FROM RHEUMATISM

C. H. King, Water Valley, Miss., cured by

Ayer's Sarsaparilla

"For five years, I suffered untold misery from muscular rheumatism. I tried every known remedy, considered the best physicians, visited the Hot Springs, but was not only a great deal further, but, by reason of its great strength, will be able to penetrate haze and fogs, and thus warn mariners that they are approaching a dangerous coast. being laid up in bed. I was unable to dress myself, except with assistance, and could only hobble about by using a cane. I had no appetite, and was advised by three doctors that I could not live. The pains, at times, were so acute that I was almost driven to by means of hypodermic injections of morphine. I had my joints paralyzed in fact, in subject, in particular, but there is only one temporary relief. After trying everything, and suffering the most awful tortures, I began to take Ayer's Sarsaparilla. Inside of two months, I was able to walk without a crutch. In three months my limbs began to strengthen, and in the course of a year, I was cured. My weight has increased 50 pounds, and I am able to do a full day's work as a railroad blacksmith."

AYER'S

The Only World's Fair Sarsaparilla.

WANTED:

A Bright Boy or Girl

In this and every town in the vicinity where there is not already an agent, to sell the New York Ledger. Publishes the Greatest Story Paper, by the week, and has agents making $20 to $50 per week. A fine chance be one made for sample copies. No Postage Risk. Full particulars call at the office of this paper.

A SLEEPING POWER.

Is It Telepathy, Instinct or What?—Ought to be Called Sleep Reading.

Within us is a power sleeping. Once in awhile some sensitive soul has felt it stir, but there was no known law that governed it, no logic with which to convince others of its being, so it was buried deep in the inner consciousness where hide ideas that dare not seek light because they are in advance of their age, says the Chicago Inter Ocean. Long ago, at the house of a friend, I saw a photograph of a man's head. As I picked it up there came over me a sense of having known the original. It was the face often friendly. When my hostess entered I asked about the photograph and she told me who it was. The name meant nothing to me but the face meant all things that I knew. Several times in the next week I looked at the photograph, always with the same sense of having known. Then eight years elapsed, during which no memory of this face came over me. One day at the theater there flashed over me that same curious sense of "having known." Instinctively I turned to catch full the glance of the original of the photograph. What he was doing there I have never found out. Several miles away from me lived a friend. Days would elapse without our meeting but if I sat down to write him a note she would come, always crossing the note. I became so certain about it after a while that I would write the note and tear it up. Then I thought would offer her the opportunity to come. There was no use in mailing it. The sight of a certain handwriting would always make my heart sink; it was something that I could not regard. One day I found that letters were pleasing and the words fair. One dark day I found out that my instinct was right—I trust it now.

The Best Weather Cure for Paralysis.

The liveliest passenger on board the steamship City of Pekin was Humphrey Kendrick of Los Angeles. He had just returned from Japan, where his wife had loved best—ure a few years ago it completely cured him of paralysis.

When Kendrick found that he had lost control of his limbs he was prepared to spend all the money he had to get relief. It was easy enough to tell what had brought the paralysis upon him; for the first stroke came upon him when he had a bad tumble on horseback. The animal fell in such a way as to catch Kendrick squarely beneath it, severely wrenching and spraining his spine.

Kendrick found that he was much better in hot weather and this led him to go to the Hawaiian Islands. He was so much better there that he felt sure that he concluded to go to a still warmer place. Somebody told him that the south coast of Japan in summer was the place.

For many months during the hottest of hot summers Kendrick engaged in a most unique attempt to regain his health. For a month at a time he would be positively stripped to the skin in the hot sand.—San Francisco Chronicle.

Identifies Himself.

Statistics of the population would be interesting. John Smith, a traveling man from New York, who was at the Riggs house recently, states that one person out of every 10 he meets is known as himself. This used to be a source of great annoyance to him but he has proved equal to the emergency by inventing a new and agreeable mode of identification through the medium of photography. He buys photographs the size of a postage stamp in large lots, trimming them to the proper size. These he places on his business cards and leaves with his correspondents with instructions to stamp on all envelopes. The card is to be placed in the center of the envelope and his name below it. When he calls for mail he presents a duplicate photograph, thus avoiding getting other men's letters or their obtaining his. The scheme has only been in operation a month but works like a charm.—Exchange.

His Natural Bent.

Fond father—If that boy of mine has any particular bent I can't find it.

Philosopher—What experiments have you made to find out?

"Very thorough ones. I gave him a toy printing press, a steam engine, a "boy chemist" set, a clock, a hook and a lot of other things carefully selected to find out whether his tastes were literary, mechanical, artistic, commercial, or, what, and I know no more than I did before."

"What did he do with them?"

"Smashed them all up."

"Ah, I see. He is to be a furniture mover."

—New York Weekly.

REAL ESTATE COLUMN.

The Following Choice Parcels of Land Are for Sale in the Real Estate Dispatch Column of the Exchange Bank, Birmingham, Mich., Where All Inquiries Will Be Cheerfully Answered.

LOT 1.

Four and one-third acres of land in the southeast corner of the village of Birmingham, with a frontage on Woodward avenue, of 300 feet. Good house, small barn, grapes, peaches, etc., all ready to make some one a comfortable home with a chance to increase their wealth. Very best sewerage in the village. STATE OF MICHIGAN, } ss.
COUNTY OF OAKLAND, } ss.

At a session of the Probate Court for said County of Oakland, held at the Probate Office, in the city of Pontiac, on the 20th day of December, A. D. 1894. Present, Hon. Edgar O. Durfee, Judge of Probate. In the matter of the estate of SOPHIA SPRAGUE, deceased. On reading and filing the petition duly verified of Addison Sprague, praying that administration of said estate may be granted to him as executor or to some other suitable person. It is ordered that Monday, the fifteenth day of January, A. D. 1895, at ten o'clock in the forenoon, at said Probate Office, be appointed for hearing said petition, and that the heirs at law of said deceased and all persons interested in said estate are required to appear at a session of said Court, then to be holden at the Probate Office in the city of Pontiac, and show cause why the prayer of the petitioner should not be granted. And it is further ordered that said petitioner give notice to the persons interested in said estate of the pendency of said petition, and the hearing thereof, by causing a copy of this order to be published in the Oakland County Gazette, a newspaper printed and circulated in said county of Oakland, for three successive weeks previous to said day of hearing.

STATE OF MICHIGAN, } ss.
COUNTY OF OAKLAND, }

At a session of the Probate Court for said County of Oakland, held at the Probate Office, in the city of Pontiac, on the 20th day of December, A. D. 1894. Present, Hon. Edgar O. Durfee, Judge of Probate. In the matter of the estate of Margaret Jones, deceased. On reading and filing the petition duly verified of Thomas Jones, praying that a certain instrument now on file in this court and purporting to be the last will and testament of said deceased may be admitted to probate and that administration of said estate may be granted to him as executor or to some other suitable person. It is ordered that Monday, the 16th day of January, A. D. 1895, at ten o'clock in the forenoon, at said Probate Office, be appointed for hearing said petition, and that the heirs at law of said deceased and all persons interested in said estate are required to appear at a session of said Court, then to be holden at the Probate Office in the city of Pontiac, and show cause why the prayer of the petitioner should not be granted. And it is further ordered that said petitioner give notice to the persons interested in said estate of the pendency of said petition, and the hearing thereof, by causing a copy of this order to be published in the Oakland County Gazette, a newspaper printed and circulated in said county of Oakland, for three successive weeks previous to said day of hearing.

(A true copy.) EDGAR O. DURFEE,
Judge of Probate.
JOHN JAMES,
Probate Register.

SYPHILIS EMISSIONS STRICTURE CURED

CURES GUARANTEED OR MONEY REFUNDED

Capt. Chas. Ferry says: "I owe it to the K. & K. Medical Institute, Atlanta, Ga., to say that I was entirely cured of Emissions, Nervousness, Lack of Energy, Pimples on the Face, Bashfulness, Timidity, Aversion to Society, Sore Throat, Mucous Patches in the Mouth, Hair Falling Out, Bones Aching at night, Kidneys and Bladder Troubles, Dizziness, Specks before the eyes, Loss of Sight, Blood Poisoning, Rheumatism, Decayed Teeth, Loss of Hair, Boils, Pimples on the face, Ulcers on the body and limbs, Catarrh, Dyspepsia, Indigestion, Constipation, Kidney and Bladder Troubles, Failing Memory, Loss of Manly Power, Lack of Energy, Organs Shrunken and Undeveloped, Unfitness to Marry, Barrenness, Impure Blood, Consumption, Insanity and Suicidal Thoughts, Impoverishment of the Blood, Wasting Diseases, Decay, Death, the Hereafter. I was a victim of self-abuse and bad habits contracted when young and ignorant of the consequences. I am now a happy man, and recommend all who are afflicted to write to Drs. K. & K. Medical Institute, Atlanta, Ga., for their book and question list. I have been troubled for many years with
