DESTROYING AN ENEMY'S MINES.

These mines are secured to one of the best latitudes outside of the Arctic circle, and buoys being so arranged as to drop overboard at the proper time.

Ready Submarine Mines

Methods by Which They May Be Rendered Useless—Countermining.

Aside from the navigable or automobile torpedo, the passive torpedoes or mines that guard the entrances to ports against unwelcome visitors are the dread of all present perfected means of subaqueous warfare.

There are two kinds of mines used generally for this purpose, and they are, first the observation mine, which is exploded by an observer when he sees that the foe's vessel is over that mine.

With us, the work of laying or planting defensive mine fields falls to the army, and upon the navy of a foe is placed the very questionable distinction of destroying them.

poorly mistled a countermining attack. Again, the approaches to either Havana or Matanzas are too well guarded to make either ordinary countermining or creeping reasonable safe or successful.

Boats described as steel rams are now in use in ice-blocked Russian harbors. They are now used to force their way through thick ice, even with 72 degrees of frost.

DIVERS ESCAPE A SHARK.
