

A BUSINESS VENTURE.

A sign hanging above a little shop told the world of Hayside that Miss Jane Doe, milliner, had started in business.

Until this sign appeared Haylenders had been obliged to drive to Newburg or send to the city for their millinery and having formed the habit it was a question whether they would break it and patronize the new establishment. Miss Jane Doe did not know many townspeople for she had lived in the country with an old aunt, who had lately died, leaving her a legacy of \$200. It was a small capital, but being entirely dependent on her own exertions Miss Jane decided to start a millinery shop. She was not enough to satisfy herself, being almost 50, but she was a timid woman and thought it better to ask Mr. Hope's advice first. Mr. Hope was president of the bank, an old friend of her aunt's and much admired and respected by herself. He was just entering his seventies, but many a man of 50 envied his vitality and youthfulness of feeling. He was a widower and lived alone in the "great house" of the village, where he dispensed hospitality and charity with an open hand. Rich, influential and busy, he yet had time to listen to any tale of distress or give advice when requested. Mr. Hope had always liked little Miss Jane and was more than willing to listen to her plans and help her all he could. She was shown into the parlor, where she sat down like one of the roses she held in her hands and making quite a pretty picture.

"I have \$200 you know, Mr. Hope. Would you advise me to start a millinery shop with it or save it and go to the city to get employment?" she asked.

"Mr. Hope knew how difficult it would be for a woman like Miss Jane, untrained and timid to get work in the city, and quickly told her it would be best to try the shop and he was sure she would get on well.

"Bring on the goods you can get and you will be sure to succeed. Everybody will buy from me. I don't wear bonnets myself," he added, laughing. "But I'll send all my friends to you."

At the close of this interview the prospective milliner left the banker with a light heart and had vision of a little shop expanding in time to a great establishment, where she herself was mistress of a great army of assistants.

In a short while the new store was opened to the public, its owner having taken up in the city and bought a small but handsome line of goods to

Two FAMOUS RESORTS.

An Outing Hint from "Outing." Fast, safe, superbly equipped and most carefully governed, one need not wonder at the great popularity of New York Central. No other line affords such facilities for travel through the East and the West as this wonderful four-track system. In the possession of Grand Central Station, located in the heart of New York City and within trifling distances of all first-class hotels, this railway offers greater advantages than competing lines. Spring, summer, autumn and winter, it has attractions irresistible. The great Northern Wilderness, playground of the State, now beckons its thousands. As autumn falls, America's scenic masterpiece, Niagara, will claim its annual host of pilgrims with its majestic power, the terrific turmoil of the whirlpools and of the picturesque surroundings, the awesome Cave of the Winds and the several other minor attractions of the vicinity. And when winter comes, then the entire scene transformed to what seems a fairyland of marvelous frost dressings, of icy fountains and snowy palaces, of gleaming, crystal pine barriers valiantly striving to cope with the roaring, foaming plunge of water, will present a spectacle of weird, mysterious beauty which is not duplicated in the world.—Outing.

First Electric Road Was in Ireland. The first electric railway in the world was built in Ireland, from Bushmills to Glenties, in 1825.

To the Rockies and Beyond! Hours are saved when you take the Missouri Pacific-Rock Island through sleeping car leaving St. Louis 9 a. m., arriving Denver 11 o'clock next morning.

Character is always writing its name indelibly on the face.

EDUCATIONAL.

THE UNIVERSITY OF NOTRE DAME. Notre Dame, Indiana. Classics, literature, history, science, mathematics, philosophy, law, medicine, agriculture, engineering, architecture, etc.

ST. MARY'S ACADEMY. Notre Dame, P. O., Indiana. (One mile west of the University of Notre Dame.) The 20th Anniversary Term will open Monday September 1st, 1909.

SCIENTIFIC TOPICS.

CURRENT NOTES OF DISCOVERY AND INVENTION.

The Value of Vaccination Proved—Results of an Experiment in the Army Shown in Military Campaigns—Colonel Stripes Used for Trepanning Child's Skull.

Value of Vaccination Proved. The French army recently made an experiment in the use of the "Wonderful Century," on vaccination has called out opinions held by the public, and in different parts of the world on the subject.

The child stood the operation remarkably well, and within five hours after it was taken from the operating table showed marked signs of improvement.

Yacht for Salt Lake. Save during the rainy season, Lake LeRoy, in western Australia, is quite dry, and the water evaporates so fast that the weather approaches a smooth, glassy floor of crystalline salt.

That great empire, in consequence of the calamitous small-pox epidemic of 1871, enacted the law of 1874, which makes vaccination obligatory on all subjects of the empire.

AN IRON FOUNDRY AT SEA. The United Kingdom of Such Work Ashore Entirely Missing.

A foundry at sea had not been heard of before the cruise of the Vulcan, the Engineering Magazine. Whatever other kind of naval repair work had been executed heretofore on board ship, the work was done by the use of iron castings that had not been attempted in her facilities for this new line of work.

Names Known of Old. The telephone, now known as the telephone and the microphone are of comparatively recent invention, but the origin of the names dates back many years.

Barbed Wire for Italian Vineyards. The use of barbed wire is increasing largely in Italy, and it is used for training vines and for great service in keeping thieves out of the vineyards after dark.

UNCANNY FIGURES. There is something uncanny about figures, which, though perfectly correct, are nevertheless incomprehensible. One knows that if you multiply 27 by 3, you get 81.

Danger in Steel Rod. Sadie Tunn, the 13-year-old girl who was struck by lightning in New York last Tuesday and nearly killed, was carrying a steel-rod umbrella.

Forgotten Long Ago Doubtless. This is an interesting clause in the constitution of Nevada of 1879, to limit professional offenders.

A Solemn Declaration. New York Tribune: Last week there was a marriage in the West by the Friends' ceremony, but the grave Quaker preacher thought it due to the friends of the couple to borrow a phrase or two from the Episcopal service.

Celluloid Strips. By a novel form of trepanning a 3-year-old child, lithographer, was cured of a skull disease.

Offenses Against a Kaiser. Kaiser Wilhelm's dignity in the year 1898, were punished, taken altogether, with 2,000 years of imprisonment, according to the Nuremberger Zeitung.

The man who is honest merely for policy is practically dishonest.
