Blamberg vs. Beekman, et al.

DOES IT PAY TO BUY CHEAP?

A cheap remedy for coughs and colds is all right, but you want something that will relieve and cure the more severe and dangerous results of throat and lung troubles. What shall you do? Go to a warmer and more equable climate? Yes, if possible; if not possible for you then in either case take the ONLY remedy that has been introduced in all civilized countries with success in severe throat and lung troubles, "Boschee's German syrup." It not only heals and stimulates the tissues to destroy the germ disease but allays irritation, dangerous expectoration, gives a good night's rest and cures the patient. Try one bottle. Recommended many years by all druggists in the world. Sample bottles at Whitehead & Mitchells.

IN THE COAL REGIONS

STORY OF EXPLOSION IN PENNSYLVANIA COLLIERY.

One of the Worst Mine Disasters in the History of the State Dulled the Gladdening Yuletide—Twenty Lives Lost—Many Injured.

(Special Letter.)

The Christmas season of 1899 will long be remembered by the inhabitants of Fayette county, Pa., as one of sorrow and grief, for it ushered in one of the most appalling colliery disasters in the history of that section of the state. Not since the Mammoth mine disaster in the neighboring county of Westmoreland several years ago, which left more than a hundred widows and orphans in the Brownsville district, has such a ghastly scene been witnessed as that which greeted the gaze of Saturday's visitors at the Brazil mine, the shocking event having occurred Brownsville. Without the slightest warning an explosion of gas occurred in the Brazil mine and killed nine in a twinkle, 20 perished and 22 were injured. The Brazil mine is one of the best equipped in Western Pennsylvania, and is operated by the Brazil Coal company, of which Thomas Lynch is president and general manager. The mine is a slope one, and is worked by the room and pillar system. It is opened on the Pittsburg vein, and is about 1,000 feet deep. The mine is considered a very dry one, and is worked nearly altogether by electricity. The mine is ventilated by a fan, which is run by electricity, and is capable of producing 150,000 cubic feet of air per minute. The mine is also provided with a large number of safety lamps, and the miners are not allowed to enter the mine without them
