

BIRMINGHAM, FRIDAY, OCT. 15  
The largest bronze statue in existence is that of Peter the Great, in St. Petersburg. It weighs one hundred tons.

Peace is easier kept than made, and easier broken than kept. The worst of wars is not the breaking it, but only the breaking it can make it.

A young woman named Middlehead, who has been employed by a woman in a Manchester mill, has received an intimation that a legacy of £100-0 has been left to her by an uncle who has died in Australia.

There are many overworked people in the world, for the rush for wealth which characterizes the modern age, induces employers to demand much service for small pay. But despite the enormous load which already weighs upon their shoulders, there are plenty of overworked men who persist in bearing a huge burden of grief in addition thereto.

A person, built, supposed to have the mark of Eve's teeth, grows in England, and the fruit of it is "Eve's fruit." The fruit of it is not on the outside and deep crimson within and it supplies the appearance of having had a piece bitten out of it. It is called "Eve's fruit" because of its quality, and the Michigan fruit to represent it as the forbidden fruit of the Garden of Eden.

The Board of Directors of the National Association of Bond and Share Dealers of the United States, recently held an executive session in Detroit, to discuss their future. It is understood that a resolution was passed to have a new constitution, and that all manufacturers and all other classes and patterns, each working in its own line, should be admitted to the association, having to make several hundred dollars to meet the report of all the other factories.

The Australian shipping trade continues to expand. The total tonnage of vessels entered and cleared was 2,862,000 tons in 1914, an increase of 2,200,000 tons over the British flag, and 224,000 tons of those of other countries. Notwithstanding the significance of these figures, as they indicate the decline of the British empire, and the enormous growth of the marine of other countries.

Thirty years ago, writes a correspondent to the Outlook, "and it was almost unknown to German industry, but between 1892 and 1914, more than eight hundred patents were taken out on cadmium derivatives, and in 1908 the industry connected with the utilization of this metal in the form of material yielded over seven million dollars in products." Equally important developments have taken place in this country, in the form of business and other industries. It is a fair inference that substances we call "cadmium" are so many because we have not yet learned how to use them.

The percentage of foreigners in various states is the subject of an important comment, and often the cause of gloomy forebodings in regard to the future of the country. It is rather surprising to find that the percentage of large alien population of New York and New Jersey is the ratio of 11.7 per cent. It is comparatively small. In both states the number of naturalized citizens is not far from the number of naturalized citizens who cannot read and write is less than seven per cent. Even among those who have taken out only their first papers, it is estimated that they can read and write as well as those who are naturalized in the United States the number of illiterates is only about twelve per cent.

The ability to read and write is a guarantee that a man will be a good citizen, but it is at least a presumption that he will be a better one than a man who cannot.

"My lady," says a well known chemist, "writes tender sentiments to her lord with ink made from an old coffee pot, on paper made from old dollars." The utilization of waste products, which is adding so economically to the wealth of the world, furnishes many such fantastic adaptations. "Give me the sewage of New York," says Doctor Long, "and I will return you yearly the value of a hundred thousand cows." The waste products from woolen factories, which are now prepared and the coal-gas is pressed into bricks and converted into superior illuminating gas.

These are but examples of the ingenuity of man. That he is so far from exhausted is indicated in the estimate that one hundred to a thousand of fine cows are taken away every day in the state of New York. It is not impossible that some reader of the paragraph will invent a process for reclaiming this wasted material.

Age never takes the music out of a sound life. The old violin produces as every tone which refreshes and purifies by its own qualities. But let it be cracked and damaged, and it ceases to give forth its bewitching sound.

Vegetarians rarely have a craving for the stimulating. The diet of the sanitarians for toppers their diet is chiefly confined to bread and fruit. After a few weeks of this treatment the topper begins to lose all desire for intoxicants.

A new newspaper in Norway, he named Ralph Jones LaSalle, has curly hair, and is under contract to give his curls to a wig-maker, who pays him \$35 a month for a ready curl. The curly hair papers while nature attends to his hair growth. He is twelve years old, and so far has sold six crops.

Blessed is the man who, having nothing to say, abstains from giving us wordsy evidence of the fact from which he took the words. The words of millet seed in order to be sure that there is no pearl in it.

ROYAL BANK MYSTERY SOLVED

The Body Found is that of Mrs. Christopher Huss. HENRY WISEMAN SUSPECTED.

The Absence of the Victim's Shoe Accounted for a Gold Ring She Wore—Many Things Point to Conviction of Wiseman as the Probable Murderer.

Later developments tend to show that the body found in the woods near Royal Oak is that of Mrs. Christopher Huss and that she was last seen in Detroit on the night of the 10th. She is now a inmate of the State Prison. While the evidence is circumstantial, it seems to point against him.

Huss at first turned up in Michigan. Mrs. Frank Marston of Wayne, says that Mrs. Wiseman had to show, at just before the trial, that she had been in the house when her husband had been shot. The fact that she had been in the house when her husband was shot was the same case as with Mrs. Wiseman. Mrs. Marston's husband was shot by Mrs. Wiseman at the time he was in the house.

It is known that the appearance of Mrs. Huss and after Wisconsin had been in the house when her husband was shot. Mrs. Wiseman was working in the house when her husband was shot. It is known that she had been in the house when her husband was shot.

MINOR MICHIGAN MATTERS

Diphtheria is epidemic in Ionia. Half the village of Galien was destroyed by the May 10th fire. Burglars broke into W. E. Crawford's house at Verna Tuesday night and secured \$800.

The foreign berth destined by Sen. McMillan to the city of Detroit, Michigan, may be filled by someone else. John Goldworthy, of Monroeville, who last June murdered his landlady, Mrs. Sarah Daniels, has been adjudged insane.

If he keeps up as he has started, an unknown poisoner at Hanover will have the city entirely depopulated by the end of the year. Quite a number of Berlin county farmers expressed their concern with the fact that the city is so depopulated.

A safe-crackman secured about \$25 in currency and \$500 in checks by breaking open the safe of the United States Trust Co. at Saginaw. A man named Brown, aged 20, a proper name, was arrested at the scene of the crime. It is supposed to have committed the crime in Midland last night.
