THE MARKETS.—A cattle dealer says: "Cattle will be lower for a time for the medium grades, but the winter grades will be higher. Good cattle will remain steady, and will be in good demand. There is a possibility that next winter will be comparatively few poor cattle shipped in here, and the year after will be a very good one. The reason for this is that the farmers of Michigan have quit raising scrub cattle, and started into blooded stock that will make a profit for the owner. They realize that they have been feeding for nothing for a long time, and that the quality of the beef is poor. They will find the thin and fat cattle growing very scarce. The price of the small breeds can be sold for breeding purposes at any price. I think this winter will be a good one for feeding. There will be less cattle got rid of this year than last on that account and therefore they will be higher."
