OSTRICH FARMING IN AFRICA.

Shows Presence of Nearly Half Million Birds.

The ostrich census in South Africa shows 457,000 birds in the colony. There are two sorts of ostrich farming, the one grazing them on fields and the other on farms. The birds on the farms are kept, and the other are left to find their own food in open camps up to 5,000 acres, and require from ten to twenty acres to a bird. In the first case the great drawback is the great cost of sand and water with humans and under permanent irrigation, it running from \$100 to \$600 per acre. In the second case the drawback is the greater loss from loss to twenty acres to a bird. In the first case the great drawback is the great cost of sand and water with humans and under permanent irrigation, it running from \$100 to \$600 per acre. In the second case the drawback is the greater loss from loss to twenty acres to a bird.
