

Do not neglect the kidneys when you notice lack of control over the secretions. Passages become too frequent; uric acid is discovered and sediment appears. No medicine for such troubles like Doan's Kidney Pills. They quickly remove kidney disorders.

Mrs. A. E. Fulton, 811 S. Madison, Portland, Ore., says: "My limbs swelled and I was unable to move the stomach and had puffy spots beneath the eyes. My kidneys were very unhealthy and the secretions much disordered. The dropsical swellings began to abate after I began using Doan's Kidney Pills and soon I was cured."

Remember the name—Doan's. For sale by all dealers. 50 cents a box. Foster-Milburn Co., Buffalo, N. Y.

EVERY BREEDER SHOULD POSSESS DIPPING TANK

Even Carefully Kept Herds and Flocks Are Liable to Become Infested With Vermin—Inexpensive Plant Illustrated.

A Practical Dipping Tank.

The time to rid flocks of sheep and herds of ticks and lice is during the warm months, and then there will be none to bother with in the winter time and to annoy animals that only bite on the wet animals that get from them. Of course while the flocks and herds are cleaned up, the buildings must also be properly treated and cleaned up, and there is a general reinfestation from them, says Wisconsin Agriculturalist. Every sheep plant as a part of its equipment, for even carefully kept herds and flocks are liable to become infested with vermin such as lice and ticks. A convenient, inexpensive and durable dipping tank may be constructed on the plan of the one represented in the accompanying illustration. The sheep or hogs are driven in at a receiving chute, plunged into a tank containing a disinfectant solution, made to swim to the other end, where they can climb over another chute and return to the pens or into paddocks. The general construction of the chute is not so much important as the plan of the illustration. Good cedar posts set firmly into the ground three feet apart and the reception chute at the ends of the tank, which should be no farther apart than the top width of the tank, answer the purpose of supports. Pieces of extra lumber are nailed to each pair at proper height to give the incline to the floors. Plans for boards for the flooring and inch boards for the sides are attached to the receiving chute to the right of the illustration has cleats nailed across its top to aid the animals in making the climb; the decline is made of galvanized iron and covered with a sheet of galvanized zinc to prevent the animals resisting being plunged into the tank. The cleats of the former are nailed straight across. A gate is attached at the entrance to the chute so that a number of animals may be standing at a time while the dippers are working at the tank. The distance between the posts of the receiving chute on the sides is four feet, and the height of the incline is one foot and a half. The incline of the chute through which the animals leave the tank is

Double the Wheat Yield of Your Land

Crop rotation and good tilage will do it all. You need fertilizer—need Armour's. In order to secure a proper return on the investment in your land you MUST increase the yield per acre.

Armour's Fertilizers

For wheat has a record of always producing the heaviest yield. The wheat this Fall—Grow more wheat—Make more money. Ask your dealer.

Armour Fertilizer Works, Chicago

GENERAL VIEW OF MINING

Brazil has practically a monopoly of the world's supply of the black diamond, while the United States is its largest market. It is found in La Chapada and Lavras districts of the province of Bahia, Brazil, where it is mined from river beds and other alluvium. The most sell their find agents of exporting firms in the city of Bahia. It is calculated that his port ships annually about 14,000, 000 to 14,600,000 worth of black diamonds, and with the adoption of modern methods and machinery in place of the extremely primitive ones formerly employed, the industry will be tremendously stimulated. About twenty-five years ago a stone of 1,100 carats was found, followed by one of 1,700 carats, and in 1895 a gigantic stone of 3,078 carats, or 615 grams, which was purchased by a New York house for \$12,000 and broken up into pieces of suitable size for diamond drills. At present prices this stone would be worth about \$25,000,000, during the past ten years stones of 40 to 800 carats have been discovered, while they are frequently found weighing from 100 to 200 carats.

HIS WISH.

Mr. Henpeck—Ah Henry, when I'm gone you'll never get another wife like me.

Mr. Henpeck (sotto voce)—I hope not.

It is a Mistake

Many have the idea that anything will sell if advertised strongly enough. This is a great mistake. True, a large sale might be made by advertising an absolutely worthless article but it is only the article that is bought again and again that pays. An example of the big success of a worthless article is the enormous sale that article is the enormous sale that has grown up for Caesarets Candy Caramel. This wonderful record is the result of great merit successfully made known through persistent advertising and through mouth-to-mouth recommendation given by Caesarets by its friends and users.

Many Women who are Splendid Cooks

dread having to prepare an elaborate dinner because they are not sufficiently strong to stand over an intensely hot open fire. This is especially true in winter. Every woman who takes pride in the table she sets, but often it is done at tremendous cost to her own vitality through the weakening effect of cooking over a coal range in a hot kitchen.

It is no longer necessary to wear yourself out preparing a fine dinner. Even in the best of weather you can cook a large dinner without being worn out.

New Perfection Oil Cook-stove

Gives no outside heat, no smoke, no ash. It will cook the biggest dinner without heating the kitchen or the cook. It is a revolution in kitchen appliances, and it is ready to be used in any kitchen. You don't have to wait fifteen or twenty minutes for it to get going. Light and it's ready. By simply turning the gas up you get a glow in five minutes. Heat on the bottom of the pan, and when you have a Cabinet Top with eight for keeping plates and dishes, a coffee pot or cup, and an even rack for towels. It has five burners, health and frugal. It does all a woman needs to do. It has 1, 2 and 3 burners; the 2 and 3 burner sizes can be used with almost any range.

Every dealer everywhere. If not in your town, write for catalogue to Standard Oil Company.

Standard Oil Company
(Incorporated)

more extensively and systematically pursued in the states of Minas Geraes and Bahia than elsewhere in Brazil. Matti Grosso, Goyas, and Parana have yielded sufficient results to justify the belief that their future as centers of diamond production will be proper.

The primitive methods of mining employed in Brazil until recent years have, nevertheless, abundantly revealed the natural productiveness of the Brazilian diamondiferous deposits. Two native methods are still very largely in use, according to the locality to be worked. The first of these, which is found suitable for the diamond-bearing streams of the Diamantina district, somewhat resembles that of the French and Spanish districts, and is based primarily in digging out sand and gravel, which are put into small wooden bowls, each capable of holding 8 or 10 pounds. The native miners then proceed in Indian file down the river or stream, where they laboriously wash the material, gradually separating rid of all lighter particles and debris until the 'golden' diamonds, which sink more readily than themselves through the water, are secured.

Looked Like a Pattern.

"My dear," said the thoughtful husband, "if you notice a large sheet of paper with a lot of diagrams on it about my desk?"

"You mean that big piece with data and curves and diagonals and things all over it?"

"Yes, it was my map of the path of Haley's comet," said the astronomer.

"My goodness! I thought it was that pattern I asked you to get, and the dressmaker is cutting out my new shirtwaist by it!"—Chicago Evening Post.

POOR METHOD OF FARMING

Agricultural Implements Exposed to Inclemency of Weather and Used By Peasantry for Roofing Places.

(By S. M. MILLER.)

In March I drove ten miles to a big farm in another part of the county and on the way I counted five mowers, one new reaper, and six plows, and found in the fields or alongside barns without shelter. In one barnyard which confined about twenty Holstein cows, I saw the roof of one side of the barn. Part of the roof was made of eaves from what had dripped rain and snow and formed an ice ridge six feet long. The roof was made of blades of the machine and there was evidence that this was the favorite roof for the farmer to use.

In one field a breaking plow had been left standing at the end of a furrow in a corner of the field and the snow covered the beam. One handle was broken off. At the sale a fine reaper and mower were sold. The reaper brought \$14 and the mower nine dollars. Both were new two year olds. I bought a likely looking Jersey heifer but when I got her home discovered that she was lousy. The owner of this farm told me he was going to move to Canada where he could get some cheap land for his boys. "My dear old 'nephew in farms in the states any more," he said. "Land is too high. I figure I can buy 360 acres up in Canada for what my 120 will bring here."

Perhaps he was right, but it seemed to me that if he had farmed his 120 acres right up to the handle in every way, he would have been better off than after selling them. He would have had the pleasure of moving and equipping his new big farm in the northwest. The farm showed every evidence of neglect and small tillage. It was unthrifty in appearance and showed the lack of system. With such a farm the farmer might as well go to the water. That is the saddest part of the great objection to me and to my boys, who went along, as well.

HE ENJOYED IT.

A Protection Against the Heat.

When you begin to think it a personal matter between you and the heat to see which is the hotter, buy your 'old glass or a bottle of Coca-Cola. It is cooling-relieves fatigue and cures the heat. Wholesome is the purest water and also better to drink. At soda fountains and carbonated in bottles—see everywhere. See that you get the 'Truth About Coca-Cola' and the Coca-Cola Baseball Record Book for 1910. The latter contains the famous poem 'Casey' at the 'Big' 'rewards schedule for both leagues, and other valuable baseball information compiled by authorities. Address The Coca-Cola Co., Atlanta, Ga.

Foxy Hiram.

"Well, now, if that ain't surprising!" "I can't say but that is surprising!" "I can't say but that is surprising!" "I can't say but that is surprising!" "I can't say but that is surprising!" "I can't say but that is surprising!" "I can't say but that is surprising!" "I can't say but that is surprising!"

The Diplomat and the Cat.

In the biography of Cecil Rhodes it is related that Lord Odo Russell, British ambassador in 1888, told him of the most delicate affair he had ever adjusted.

Naples, an excellent diplomat shot, lived near Cardinal Antonelli's mother, whose standing back to back. On the top of the boundary wall between the houses used to pass a magnificent Pisan cat, the property of the cardinal's mother.

The queen, who rose very early, saw the cat one morning, and the excitement was so strong for her, she cried, and it fell. The excitement was so tremendous, the chances of the city city were overwhelmed with correspondence, but the affair was at last composed by the efforts of Lord Russell, the universal peacekeeper. He had no time up to that time the two most difficult affairs which had fallen to him to arrange were the embalmment of General Fox (who had been "killed" by the French consuls) and the murder of Cardinal Russell's mother's cat.

Compound Interest

comes to life when the body feels the delicious glow of vigor, high and energy.

That Certain Sense

of vigor in the brain and easy poise of the nerves comes when improper foods are cut out and predigested.

Grape-Nuts

take their place.

If it has taken you years to run down don't expect one mouthful of this great food to bring you back for it is not a stimulant but a **rebuilder.**

Ten days trial sticks to it.

METHOD OF FEEDING POULTRY

The device shown in the illustration gives a novice way to feed mangos and cabbage and so on to poultry. When the lower portion is all eaten of the chicks a share is given to the fowls. The rod is made to rest in a groove on posts set in the ground. The roots do not get soiled, and this proves an economical plan. The poultry will eat all, clear to the last bit.

Surface Culture.

Frequent surface cultivation makes the soil of the plant more available, prevents evaporation, and holds water in store for summer use.

Kindness for Brood Hen.

Don't be hard on the poor brood hen because she wants to set. Maybe she has raised you one or two broods of chicks this season. If she has not, she can be helped by your kindness toward laying, and anyway, who can't help it if she wants to set. She has raised a little, old man, dirty hole of a place, on half rations, or no rations at all. Give her a good, clean pen with plenty of food and clean water twice a day. Good care will soon set her on her feet again; whereas, if treated in her weakened condition may cause disease that will take not only her but may spread to the whole flock.

Watering Plants.

Watering in the evening, besides aiding in the spread of fungous diseases, also causes "damping off." Watering should be done in the morning, during heavy, cloudy weather. Shaded plants should be considered. Plants growing in the bright sunlight always need more water than those in the shade, for evaporation and transpiration are always greater under such circumstances. Mid-day watering, when the sun shines directly on the foliage, will wilt the foliage of many of our common house plants. Shading during the hot days will strengthen the plants and assist in retaining moisture.

Big Potato Crop.

On Lord Rosebery's estate at Dalmeny, Scotland, an acre has been made to produce more than 2,000 measured bushels of potatoes. This yield is so remarkable that the department of agriculture at Washington has sent an expert to Scotland to find out how it was made. It is expected that will set the American growers to increasing his potato yield.

Topdressing Pastures.

Pastures may be **topdressed** and should not be grazed too early in spring nor too heavily. Where pastures can be plowed it is advisable to plow and manure.

The raising of clover, corn and farge crops furnishes a larger amount of protein for stock and less feed will need to be purchased.

Where Customs Man Fell.

"If that customs inspector had known ever so little about fashioning and the style of clothing people are wearing he wouldn't have spent so long adjusting it." On the question of whether I ought to pay for that old green jacket," said a young woman just through with the inspection of an import. "No," I thought that thing last time when I wore it and brought it with me when I left here last fall, but it still has the same style of fashioning. The inspector insisted that I bought it in Paris this time. That's absurd! If I have known nothing about fashioning, he would have known without paying to think that Kton jackets have been worn five years at least."

Jack on the Walls.

Scribbles—I have just visited a house in the suburbs that has five acres of wall.

Driddles—That was a wise move, or Scribbles—Why do you think so? Driddles—Well, five outside doors, five windows, five French conservatories, and the murder of Cardinal Russell's mother's cat.
