## Sand And Gravel

For most good concrete work, a mixture of one part cement, two and one-half sand and five parts gravel or crushed stone will do. By increasing the proportion of cement, the concrete will be stronger, provided the mixing is thoroughly done. Let us figure with you whenever you need any cement for concrete. We handle UNIVERSAL—use it and you will be sure you have the best cement.

## Home Builders Want Good Lumber

In fact, most of them absolutely insist on getting the best that their money will buy, and in that particular we heartily agree with them, because that is just the way we buy our Lumber. It must be strictly up to the grade. There are some manufacturers, however, who interpret grades more liberally than others, and you can bet your last dollar that we know who they are. Because of this inside knowledge we're not afraid to put our Lumber over against any in the country. Come in and look this Lumber over and let us make you prices.
