

Leopard Plush Motor Coat With Hood

Fundamental Principles of Health. By ALBERT S. GRAY, M.D. (Copyright, 1914, by A.S. Gray) MANUFACTURE OF MALT.

FOUR FREIGHT CARS TO HAUL TUBE

Four Cars Were Required to Haul This Steel Tube Measuring 120 Feet in Length and Weighing 149,000 Pounds.

MARKET QUOTATIONS

Live Stock, Grain and General Farm... BETHOON... Receipts, 3,500; market dull; best heavy steers, \$7.50...

It does not now seem that it is the development of life in an egg by the heat from a kerosene lamp, or the birth of a human individual. But we do know that the same principles are at work in all three forms of life, the only difference being one of degree.

Animal life is but a continuation of plant life, a part of a cycle, but a cycle in which the animal is dependent on the plant, not the plant on the animal. Life cannot exist in matter without plants. Therefore, in consuming deficient plant food, we are cutting our own life chain.

In this fact will be found the reason for the effectiveness of malt tonics in low states of vitality. Containing practically all these vital elements, malt supplies in its liquid form what has been deficient in, and is exceedingly valuable as an emergency food.

Representatives of the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen and Enginemen held a great arbitration meeting in the city of Edmonton, Alberta, where they have to extend the thermometer downward in winter to register the cold.

When the winter months snow slides are frequent, related the engineer. "And for variation in the spring and fall we used to have mud and rock slides. During the average season there from 30 to 45 feet of snow falls, and in the old days besides the obstacle of drifts we had a four and one-half foot cresting of snow over the top of the tunnel ascending many hundred feet perches above the lower division.

Cracks in Railroad Tires. Thermal cracks in railroad tires are attributed by the interstate commerce commission largely to the action of the tires in the air, extending from the center affected, causing wide fluctuations in the magnitude of the shrinkage strains.

Employed in Milan, Italy. At the outbreak of the war in Europe, the majority of the workers at that time employed in the adjoining countries of France, Switzerland, and Austria, and also some extent in Germany and Russia, were recruited.

Columbia's Few Railroads. Colombia, with an area of 500,000 miles and a population of 5,000,000 has less than 700 miles of railroad in operation. There are 13 different lines, the shortest eight miles long and the longest 95 miles.

A steel tube 120 feet long and 10 feet in diameter was hauled across the continent recently, requiring four freight cars, each loaded with 149,000 pounds, and it is said to be the largest single piece of freight ever shipped by rail for such a distance.

IN COUNTRY OF SNOW NOT FOR THE PEDESTRIAN

Warning to Keep Off the Railroad Tracks... VETERAN ENGINEER TELLS OF EXCITING EXPERIENCES.

Slide That Overturned Locomotive and Plow, Causing the Death of Seven Men—Mud and Rock Slides as Variation.

NO wonder the devotees of motorcars are braving the coldest weather. They may envelop themselves from crown to toe in cold-proof coats having goods attached made of the same material as the coat. The fur fabrics that have had so great a vogue this season have developed in patterns especially suited to midwinter motor coats. These plushes are used also for lining coats of other fabrics, and are warm as skins.

Discard Small Turban. In Paris the leaders of fashion have discarded the small turban hat for the larger models of white satin. These stunning hats appear in a wide variety of shapes, will gracefully fulfill brims or brims which flare more on one side than the other.

Handsomeness Coiffure Ornaments. In wonderful what implies of improvement in looks and brought about by means of the coiffure ornaments. Only beautiful and accurate youth can afford to wear again, several styles of hand-tipped. Waves that mitigate the angularity, straight lines, curls which suggest femininity, are almost invariably becoming. An added advantage of a well-groomed appearance (more evident in the coiffure than anywhere) has a compelling charm in itself.

These loops hold the band in place and is concealed under a strand of hair. Fastened on the band at one side is a cluster of grayish blue, full-blown roses of velvet, with small sprays of may rose foliage in sage green. One might wear such subdued colors with almost any costume. The sparkle of the rhinestones gives life to the pretty affair, and also narrows fancy ribbons, an instant appeal.

Two of the best designs are shown here and one hardly needs more than the picture to be able to go about copying them. One consists of a rhinestone band set to a fine silver-wire which terminates in a hairpin thrust through stitching in white, which is very effective, the pink collars on the pink and white striped dresses are embroidered with a simple design in ermine and blue, and are very attractive. The dress that has a line of French motifs in white is also very effective. With these garments the children wear stockings and russet shoes, wearing the stockings and dresses two days.

Woolly Planter's Ores. Two little girls whose mother liked to keep them in white, kept the white frocks and stockings clean only as long as the proverbial "shake" of a lady's salt. So the mother changed her plan and made plain white dresses of striped seersucker, with bloomers to match. The dresses are made by the use of white wool with large round collars of plain gingham. The white striped dresses have brown collars outlined with rather a coarse feather-
