PROPER SITE FOR VINEYARD

Hilly Ground Should Be Preferred. With slope changing South—Frequent Cultivation Needed.

In selecting a site for a vineyard hilly ground should be preferred and the slope should be toward the south.

Keep the weeds down with the frequent cultivation. This ought to be kept up during the entire life of the plant.

I believe I am safe in saying that 95 per cent of the vines in commercial vineyards, particularly around our part of the country, are Concord, and Judg. Farmer. This is the great commercial grape.

The grapes in our country are very free from disease and insect pests. Leaf hopper is a pest only where row crops are raised and about the vines.

Some good points in the commercial growing of strawberries that should be emphasized are: Buy your plants from some nurseryman who makes a specialty of handling them.

Commence cultivation as soon as the plants are set and keep it up till autumn. The soil must be loosened and no weeds allowed to grow.

They will bear the first year, but it is better to pinch off all the blossoms and wait for the second year crop.

Apple Trees Should Be Thirty Feet Apart Each Way—Dwarfs Occupy About Half of Space.

Standard apples, 30 feet apart each way. Standard pears and strong growing cherries, 15 to 20 feet apart.

Evaporation of Fruits. The most serious change which takes place in the evaporation of fruits is the loss of water.

Pruning and Spraying. Some people fall into the mistake of supposing that every tree needs pruning and spraying, but this is not the case.

Remove Diseased Wood. All diseased wood in the orchard should be removed as soon as possible.

Opportunities. The city bristles with opportunities for service. If we live right, we shall find them and utilize them.
