**The Ear-Marks of a Good Feeder**  
You will find every one of them on all **INTERNATIONAL FEED GRINDERS**  
A strong steel stand prevents wobbling. Two lag screws hold the machine firmly in position. The grinding plates are self-aligning and therefore grind evenly. A spring tension on the grinding plates keeps even grinding. A plate shifter lever at the end of the shaft is a safeguard against breakage and makes it a simple matter to clean the plates.  
An International feed grinder and an IHC oil engine make an ideal combination. The engine will furnish convenient power for operating the feed grinder, and is especially adaptable for this purpose on account of the variation of the power required in proportion to the kind of grain being ground.  
International feed grinders are made in the following types and sizes to meet all requirements:  
Type B, 6, 8, and 10-inch—grinds corn on the cob.  
Type C, 6 and 8-inch—grinds small grains and shelled corn.  
Type D, 8 and 10-inch—grinds corn in the husk, alfalfa and Kaffir corn in the husk.
