

DEMAND FOR BREAKS

OVER SEVEN MILLION BOTTLES SOLD AND DISTRIBUTED IN LESS THAN TWO YEARS TIME.

SUCCESS PHENOMENAL

Fame of the Medicine Spreads Over Whole Nation—Now Sold From Coast to Coast.

NEVER before, perhaps, in all history has the demand for a proprietary medicine ever approached the wonderful record that is now being made by Tanlac, the celebrated medicine which has been accomplishing such remarkable results in all parts of the country.

From Coast to Coast, from the Gulf to the Great Lakes, Tanlac is known and honored. Millions have taken it and have pronounced it the greatest medicine ever given to our people, and the only explanation of Tanlac's triumph in the medical world is Tanlac's true worth. Back of Tanlac's triumph in the drug stores is Tanlac's triumph in the homes. It is the people's medicine and the people themselves have made Tanlac what it is.

No matter where you go, Tanlac is a household word and it is unquestionably the most widely talked-of medicine in the world today. One person invariably tells another about a medicine that helps him and in this way scores of new hundreds may hear of Tanlac as a direct result of one bottle in a single home.

The first bottle of Tanlac to reach the public was sold just a little over two years ago in the thriving little city of Lexington, Ky., where 20,000 bottles of the medicine were sold in only a few months. Since that time there have been sold throughout the United States something over seven and a quarter million bottles, and a romance which has no parallel in the modern business world has begun.

The instant and phenomenal success which Tanlac won in Lexington has been duplicated in practically every large town, small town, village and hamlet in North America, while Hawaii, Alaska, Cuba, Porto Rico and other American possessions have clamored for Tanlac.

Just a few months ago, it was announced in the Atlanta papers that twenty-two carloads, 250,478 bottles of Tanlac had been sold through the Atlanta office alone. Since that time, 3,500,468 bottles have been sold, and the grand total now stands at over a million and a half, or to be exact, 1,605,204 bottles.

These are actual figures, and the fact that one hundred and fifty-eight carloads of Tanlac have been sold and shipped into the South and West since the first day of October, 1915, is a matter of record and can easily be verified.

One retail firm alone, the Jacoby Pharmacy Co., of Atlanta, has sold the astonishing total of 94,000 bottles within the past twelve months. What is true of Atlanta, is also true of practically every large city of the East and West, where the sales have been correspondingly large.

The greatest drug firms of the country have voluntarily come forward and

DEMAND FOR RECORDS

DETROIT FIRM BOYS A SOUND CARLOAD

MICHIGAN DRUG CO. AWARDED THE WHOLESALE DISTRIBUTING AGENCY FOR DETROIT.

THE wholesale distributing agency for Tanlac in the Detroit territory has been awarded to Michigan Drug Co., said E. C. Harris, representing the Southern and Western distributor of Tanlac, a few days ago.

"This firm," continued Mr. Harris, "gave the order for the largest order ever given by a Detroit dealer for a new preparation, but having heard through absolutely reliable sources of the remarkable and rapidly growing demand for Tanlac in other cities, this firm did not hesitate to place an order for the above amount."

In only a few weeks' time Tanlac will be placed on sale in practically every large city, town, village and hamlet in the state of Michigan.

As a matter of fact, Tanlac already has been established in a very limited time, but it is my desire that the distribution be made more complete and far-reaching.

"With this end in view, I take this means of notifying druggists and dealers who are interested to write or telegraph F. W. Willis, Fourth National Bank Bldg., Atlanta, Ga."

started in plain, cold figures, the record breaking sales everywhere, as evidenced by the startling sales records shown in the following figures:

Texas and Oklahoma dealers have sold in the five months since the first of October, 1,158,480 bottles.

Tonishing total of approximately five hundred thousand bottles or an average of 100,000 bottles per month, has been duplicated in practically every large town, small town, village and hamlet in North America, while Hawaii, Alaska, Cuba, Porto Rico and other American possessions have clamored for Tanlac.

ALFALFA RECORDS

Gives Yields Equivalent to Two or More Average Hay Crops.

MUST FIT LAND CAREFULLY

Crop, While It Returns Beautifully When Put in Return, Cannot Be Planted "Any Old Way."

By PROF. F. F. COX, Farm Crops Department, Michigan Agricultural College.

East Lansing, Mich.—Alfalfa grows best with the proper bacteria which makes the land hospitable to alfalfa. Plant the seed under these conditions and it will push its roots to a depth of 18 to 24 inches, and the alfalfa will penetrate four to six feet, causing new farms as yet untouched to pay tribute to the farmer. The upward growth of alfalfa is usually arrested, though not often realized, due to the fact that three or four cuttings are removed for hay. As a matter of fact, a good field of alfalfa will produce the equivalent of a hay crop eight or ten feet high, or from four to six tons per year to the acre.

"The alfalfa as you would have it do you into."

SHEEP WORRIED BY WORMS

Flocks Should Be Closely Watched During July and August.

By PROF. GEORGE A. BROWN, Beef Husbandry Department, Michigan Agricultural College.

East Lansing, Mich.—Sheepmen, with an eye to the well-being of their flocks, will probably be glad to get rid of this pest which has become a serious problem in the alfalfa fields of this section. This parasite is especially active in July and August.

At the first appearance of the pest, the flock should be cut off feed and water for from 18 to 24 hours, and then given from two to three tablespoons of a solution of formalin in water of skim milk. In drenching the sheep should be backed into a corner, its head slightly elevated, and the solution poured slowly from a small-necked bottle. After the first treatment the flock may be allowed to graze for two hours when they should again be drenched, and the treatment repeated the following day, and the same method followed the third day.

After the third drenching the flock should be turned onto a pasture that has not been grazed by sheep this season.

It is not possible to change pastures at this time, the lambs should be weaned as soon as a meadow or seeding is available for them, and the treatment repeated before turning them onto the new pasture. A frequent change of pasture is one of the best preventative measures that can be adopted.

The infection in the lambs takes place through the fact that some of the parasites live through the winter in the digestive tract of the mature sheep. These parasites in the ewes are continually laying eggs which pass out with the droppings and in from four days to one week (depending on weather conditions) hatch out and go into a cystic stage on the grass, thus finding their way into the lambs. A frequent change of pasture is one of the most effective preventive measures. If the flocks can be given a change of pasture every two weeks in May and June, the lambs will be drenched as described above and turned onto clean pastures early in July, very little trouble will be experienced, though the flock should be watched through the summer as a little extra effort may mean the saving of many lambs and added weight and value to the entire flock.

FARMS THE SOURCE OF WEALTH

Careful Tillage, Good Management and a Beneficial Soil.

Reading the reports of the managers of the chartered banks in Canada, one is struck by the wonderful showing that they have made during the past two or three years. They are careful in their statements, and while they attribute the success that they have made together with that which has followed their lines of business, they are careful to emphasize the fact that the condition of his business may not continue. On the other hand, they point out that the material and fundamental source of wealth is the farm. While other lines of business may have their setbacks, and while care and scrupulous care, will have to be exercised to keep an even balance, there is but little risk to the farmer, who on economic and studied lines will carry on his branch of industry and endeavor to produce what the world wants not only today, but for a long distance into the future, with a greater demand than ever in the past.

Speaking recently before a Canadian bank board at its annual meeting, the vice president, once a farmer himself, said:

"The farm is the chief source of wealth. We have now three transcontinental railways with branches running through thousands of miles of the very best unoccupied agricultural land in the world. In the natural course of things, these must attract immigration. The products of the farm are now commanding the highest prices ever known, and in my opinion even after the end of the war, high prices for foodstuffs must continue to prevail. With the mechanical appliances now available for farm work, the farmer needs no considerable supply of extra capital, but should be helped to the extent of his good security. The food supply of the world is short, and demand is likely to increase rather than decrease. Development of the world's resources and the reconstruction of devastated Europe must call for supplies for the world as a whole. The farmer has been helped rather than hurt by the war, and will continue to be, at least for a long time to come."

It is not possible to change pastures at this time, the lambs should be weaned as soon as a meadow or seeding is available for them, and the treatment repeated before turning them onto the new pasture. A frequent change of pasture is one of the best preventative measures that can be adopted.

A frequent change of pasture is one of the most effective preventive measures. If the flocks can be given a change of pasture every two weeks in May and June, the lambs will be drenched as described above and turned onto clean pastures early in July, very little trouble will be experienced, though the flock should be watched through the summer as a little extra effort may mean the saving of many lambs and added weight and value to the entire flock.

700 Sick 700 Cured

Many Women in this Condition Regain Health by Taking Lydia E. Pinkham's Vegetable Compound.

Convincing Proof of This Fact.

Ridgway, Penn.—"I suffered from female trouble with backache and pain in my side for over seven months so I could not do any of my work. I was treated by three different doctors and was getting discouraged when my sister-in-law told me how Lydia E. Pinkham's Vegetable Compound had helped her. I decided to try it, and it restored my health, so I now do all of my household work which is not light as I have a little boy three years old."

—Mrs. O. M. RINEES, Ridgway, Penn.

Mrs. Lindsey Now Keeps House For Seven.

Tennille, Ga.—"I want to tell you how much I have benefited by Lydia E. Pinkham's Vegetable Compound. About eight years ago I got in such a low state of health I was unable to keep house for three in the family. I had dull, tired, dizzy feelings, cold feet and hands nearly all the time and could scarcely sleep at all. The doctor said I had a severe case of ulceration and without an operation I would always be an invalid, but I told him I wanted to wait awhile. Our druggist advised my husband to get Lydia E. Pinkham's Vegetable Compound and it has entirely cured me. Now I keep house for seven and work in the garden some, too. I am so thankful I got this medicine. I feel as though it saved my life and have recommended it to others and they have been benefited."

—Mrs. W. E. LINDSEY, R. R. 5, Tennille, Ga.

If you want special advice write to Lydia E. Pinkham Medicine Co., confidentially Lynn, Mass. Your letter will be opened, read and answered by a woman and held in strict confidence.

DEE'S

ANY CORN LIFTS OUT, DOESN'T HURT A BIT!

No footaches! Lift your corns and calluses off with fingers—It's like magic!

Sore corns, hard corns, soft corns or any kind of a corn, can be removed as if lifted right out with the fingers if you apply upon the corn a few drops of Freese's, says a Cincinnati authority, which will be sent you in a small bottle of freese at any drug store, which will positively rid your feet of every corn or callus without pain.

What you have been told is true, if it is applied and does not even irritate the surrounding skin while applying it or afterwards.

Freese's will interest many of our readers. If your druggist hasn't any freese tell him to surely get a small bottle for you from his wholesale drug house.

Not Quite the Same.

She (usefully)—You said if I marry you, you'd be humbly grateful, and now—

He (sourly)—Well?—

She (usefully)—I'm just as humbly grateful as I can be!

Subject to it.

"Is your husband ready to draft?"

"Yes, indeed. He catches cold at the slightest thing."

BUMPER ALFALFA CROP PRODUCED IN INGHAM COUNTY.

Alfalfa of a Seedbed, Will Do Right Two or Three Times a Season for From Four to Six Years.

another crop which can be followed by alfalfa. This is a most excellent opportunity for securing alfalfa at little expense.

Second—Lime the land for alfalfa. Apply two tons of ground limestone or several cubic yards of marl before seeding. This crop requires more lime than any other crop grown in the state. The soil of Michigan is so widely deficient in calcium carbonate that in nearly all cases fields should be limed in preparation for alfalfa.

Third—Inoculate property. Unless alfalfa or sweet clover has been grown previously on the land, inoculation with the proper bacteria is necessary. Cultures can be secured on application to the department of bacteriology, Michigan Agricultural college, at 25 cents per bushel per acre. The soil method is also reliable. Spread several hundred pounds per acre of best surface soil from successful alfalfa or sweet clover patch over the ground to be seeded. Apply on cloudy day in evening and follow with harrow.

Fourth—Prepare the land thoroughly. Alfalfa should be seeded on land free of grass. June grass is its great enemy in Michigan. Follow after cultivated crop. Plow land five or six weeks before seeding, firming with roller and working thoroughly at frequent intervals. It should be kept in mind that alfalfa is to remain on the land for from four to six years. A much more thorough preparation is warranted than in the case of crops which are to occupy land for a single season.

Fifth—Plant at proper time. The best results are secured with seedlings made about July 1st. The seed which has been sown early and worked thoroughly so as to control grass and weeds. It is better to sow alfalfa seed in a shallow furrow than to broadcast it. Seedlings should be made with a companion crop of oats or barley seeded at the rate of one bushel per acre.

Sixth—Apply 15 pounds or at least 20 pounds per acre of good seed. Northern grown seed or Grimm seed is best adapted to Michigan and will winter-kill better than ordinary alfalfa seed.

The live stock, the farm, the farmer.

Need of Enthusiasm.

My son we should lay up a stock of absurd enthusiasms in the youth or else we shall reach the end of our journey with an empty heart, for we lose a great measure of them by the way.—Victor Cherbulise.

But He Isn't Always.

When the woman of the old block it is natural to assume that his father, being the head of the family, must necessarily be an old blockhead.

CULTIVATION AIDS POTATOES

Stirring Surface of Soil Soon After Planting, Gives Them Good Start.

By C. W. WAID, Potato Specialist, M. A. C.

East Lansing, Mich.—In the light of what it has cost this season to put in potatoes, the grower who has been found it profitable to omit any of the steps necessary for the production of a satisfactory crop.

The cultivator should be started as soon as the potatoes are up enough to show the rows plainly. It is assumed of course that the harrow and hoe have been done previously. The first time the cultivator is employed it should be run close to the rows and deeply. This is necessary to kill the weeds and to put it in a condition for the soil bacteria to work to best advantage. A small amount of dirt should be thrown around the plants to cover and kill any small weeds which may not have been destroyed by the harrow.

After the first time over, the cultivator should be run over shallow to avoid breaking off small rootlets. The frequency of these later cultivations will depend upon the nature of the soil and the amount of rainfall.

At least three things should be accompanied by cultivation. The soil should be kept from growing, the soil moisture from evaporating, and the surface of the soil well loosened to admit the aeration. The soil should be liberated more freely and plant growth stimulated to a greater degree if the surface of the soil is kept open and porous than will be the case if it is allowed to become firm and baked.

Cultivation should be kept up as long as it is possible to get between the rows without injuring the plants.

After the first two or three cultivations only the surface of the soil should be stirred to the surface. The soil should be stirred to the surface frequently done, especially when the weather is dry and hot, by deep cultivation close to the plants. The right kind of cultivator is very important and is very beneficial, but the wrong use may be harmful.

The Efficiency Expert.

As a rule, we take it, the efficiency expert is nearly related to the recurrent person who goes to Monte Carlo with a mathematically infallible system to break the bank and comes home broke.—Exchanges.

Color of French Flag Changed.

The color of the French flag was changed in 1124, when Louis the first carried the red ordinance of St. Denis in his contests with Henry V, the Gascon emperor.

Point of Ownership.

"Let me drive awhile. Half of this car is mine."

"Didn't you agree to take the rear half and let me have the front half?"

"Yes."

"Well, the steering wheel belongs to the front end and gives me the right to drive all the time."

One and the Same.

"Jones reminds me of a donkey sometimes."

"Yes; he makes an ass of himself quite often."

Willing Victim.

Margaret, aged four, had eaten one of two boxes of berries that her mother had purchased for company. Her mother cried, "What would you do if you had a little girl and she ate a whole box of strawberries?"

"Oh, mamma!" she exclaimed eagerly, "I'd make her eat the other box."—The Christian Herald.

Many a woman who thinks herself a beauty never succeeds in convincing her mirror.
