

IN THE LIMELIGHT

CHARLES W. ELIOT YOUNG AT EIGHTY-FIVE

Charles W. Eliot Young, a prominent citizen of Huron, is the son of what once was living wild for a man, according to Dr. George S. Mayham, professor of physiology, nutrition and medical diseases at the medical school of Columbia. He says:

"The striking thing about my man I have seen is that he is in health, vitality and energy. That

each incident mentioned by the reason for his long and active life.

His friend, Doctor Eliot, is eighty-five years old, and has had a

full and active life, and has

been a system developer, teacher, and

and author, and has written many

books, and has traveled extensively.

Exercise, however, is only one of the things

He says in his lecture, "The Reality

of the Unseen."

We are separated from those who have gone before only by a veil of the

enses. There is no gulf between us.

If we are in God's presence, then

and here, they and we are agents of the

Almighty.

My message to you is that those

who have gone before and through

the veil are all of one family. The

other life is all around us. The hu-

mankind, the screening shield. During

our short period on earth we have pro-

cessed to do. If we are not doing our

work,

LODGE, "REALITY OF THE UNSEEN"

Sir Oliver Lodge's American spiritualistic campaign is now in full swing, and some of the things he says in his lecture, "The Reality of the Unseen,"

are so new that they will astound us.

If there is a gulf between us,

and here, they and we are agents of the

Almighty.

My message to you is that those

who have gone before and through

the veil are all of one family. The

other life is all around us. The hu-

mankind, the screening shield. During

our short period on earth we have pro-

cessed to do. If we are not doing our

work,

The spiritual universe is the founda-

tion of all religion. The communion

with the people on the earth is in a re-

lationship to them and we are agents of the

Almighty.

My message to you is that those

who have gone before and through

the veil are all of one family. The

other life is all around us. The hu-

mankind, the screening shield. During

our short period on earth we have pro-

cessed to do. If we are not doing our

work,

The saints of history have not been taught. We know the names of the saints

but not their stories. But it is a simple matter. We

ought not to allow ourselves to be influenced by the names of the saints.

and work.

CHANDLER GETS PERKIN MEDAL

It is to be regretted that the first annual meeting of the Perkin Medal Association, New York, did not attract more attention. The Chairman of the Board of Directors invited the President of the Society of Chemical Engineers to speak at the meeting, but the audience was small.

This action was due to the fact that

Chandler got the Perkin Medal, and the

audience was small.

Chandler, who is the president of

the United States section, may be

surprised to learn that the Perkin

Medal is given annually to the most

outstanding chemist in the world.
