

IS FAVORED LAND

Western Canada Country of Great Possibilities.

Soil, Climate, and Weather Conditions All Factors in the Production of Unrivaled Fruit, Vegetables and Flowers as Well as Grain.

As recently as last month—to be exact, it was the 18th of October, a time of year when one naturally looks for frost upon the pumpkin, and its white froth to wander through the woods in search of the ripened nuts, and admire the beautiful colorings that the autumn atmosphere has bestowed upon the leaves, when one goes to his closet, or maybe his pawbrough, to find his heavy clothing—it was that I found myself the guest of a Western Canada housewife in her beautiful home on the outskirts of the pretty little town of Moose, Saskatchewan. The dinner? That's what Mrs. White called it. I should have termed it a banquet. There were mutton chops, broiled trout, baked potatoes, and such like. I really felt they were too—castles—down—and say, did you ever taste those Western Canadian potatoes?—down—then dessert. What was the dessert? I can see it now. Strawberries, strawberries that had been picked that morning. They consisted to the cream—and it was cream that about was the strawberries. I was told that the 18th of October, as I ate, and turned my back while a second helping was placed in front of me. I could not but think how good the strawberries and the more acquainted folk that the climate of Western Canada is such that the ripening of strawberries at any season is one of the things that can be looked upon as next to impossible. Fortunately it is rapidly giving place to one which admits of a longer season than to the north, possesses a climate that makes it possible to develop and ripen strawberries even in October.

But there's more to add. On October 14, that's a few days previous Mr. A. E. Smith, near the same town, picked a splendid crop of green beans from his garden. Near Bayville, Saskatchewan, well established, he picked during the same season a crop of peaches that at this date may seem of little moment, but when you are told that none did not suffer from any traces of weather. The information may be held to it. The position of Western Canada's climate is no longer the bubble if one goes to the west very long ago. The reason it caused thinking people to think and questioning prominent men from across the Canada who under other conditions would have gone.

In various parts of this country, at different seasons and countries, false, the government of the Dominion of Canada during the past few weeks. In the exhibits of the grains and grasses grown in Western Canada at the same time showed that fruits and vegetables that were grown there. None of these was placed in competition with the home-grown produce. It is to judge and others there came the full understanding of what it would mean to the local exhibitors if there were. The Western Canadian conditions would have gone.

CONDENSED CLASSICS

20,000 LEAGUES UNDER THE SEA

By JULES VERNE

Condensation by James B. Connelly

Julius Verne was born at Verne, France, on February 8, 1828. Though he had gone to Paris to study for the bar, he followed in the footsteps of his father, the lawyer, and became a novelist. He is best known for his science-fiction novels, including "Twenty Thousand Leagues Under the Sea" and "Journey to the Center of the Earth." The story of "Twenty Thousand Leagues Under the Sea" is set in the year 1870, when the French frigate the Nautilus, commanded by Captain Nemo, is discovered by the American ship the Albatross. The Nautilus is a submarine that has been built by a man who has escaped from the world of the living and has taken refuge in the depths of the sea.

It was leaning forward on the starboard side, and the voice of Ned Land, the big harpoonier, broke the silence. "Look! There is something we are looking for, the crew of the Nautilus." We all saw the sea monster, or whatever it was, which had been hunting for months. It had a long neck, and a head that looked like a shark. It was a strange kind of a creature. This began the history of the Nautilus. The Nautilus was a submarine that had been built by a man who had escaped from the world of the living and had taken refuge in the depths of the sea.

The Nautilus was a clear-shaped steel ship of 232 feet in length, 26 feet beam and 12 feet depth. It was a masterpiece of engineering. It was built by a man who had escaped from the world of the living and had taken refuge in the depths of the sea. The Nautilus was a submarine that had been built by a man who had escaped from the world of the living and had taken refuge in the depths of the sea.

Why should we not know what surprise awaited us. Suddenly a dazzling light emanated from the Nautilus. The Nautilus was a submarine that had been built by a man who had escaped from the world of the living and had taken refuge in the depths of the sea.

GERMAN GRIP ON RARE SUGAR GONE

America Now Producing Costly Sweetened Inulin in the Detection of Disease Germs.

RESULT OF WAR NECESSITY

Germany has secured a monopoly of the production of inulin, a rare sugar, which is used in the detection of disease germs. The production of inulin is a costly process, and Germany has been able to produce it in large quantities. This has caused a shortage of inulin in other countries, and the price has risen. The United States is now producing its own inulin, but it is still more costly than the German product.

“LAWYER, WIS.—For the last twenty years I have used Dr. Pierce's Golden Medical Discovery at times, as a general tonic, with excellent results. One bottle in the spring, and one in the fall, is usually sufficient. It has given me added energy, health and endurance, and has greatly aided me in my business and strenuous life. I have also found Dr. Pierce's Pleasant Pellets very beneficial and mild action.”

All Run Down Now Feels Fine

Katonic Ended His Troubles

“Katonic is the only thing I have found to stop my heartburn and I think it has a great help in nervous spells,” writes G. C. Johnson. “An upset stomach may cause lots of suffering all over the body. Katonic helps in such cases by removing the cause of the misery because it breaks up and carries out the excess acid and gives me the positive or tablet after meals is all you need. Big box costs only a trifle with druggist's gift.”
