ECONOMY IN HEATING

Depends Entirely Upon the Kind of STOVE YOU USE

The Garland Line of Heating Stoves is unequalled for ECONOMY of fuel and amount of STEADY HEAT generated.

HOT BLAST stoves will burn any kind of coal. Soft coal used in these stoves dis-charges no soot on your root. It automaticcally burns the gases generated and, consequently, the soot held in suspension by the gases, is destroyed and converted into heat units.

When the furnace is not in use and you want HEAT IN A HURRY on these chilly mornings, just start a kero-sene-burning BLUE FLAME stove. They are portable, take up very little room and the cost is a trifle.

For a solution to your Heating Problems consult

The Hardware House of McBride

108 N. Woodward' Avenue. Birmingham, Michigan

See this oil burner and you'll never buy coal again

If you install one of our automatic oil burners in your furnace now you'll be independent of coal and freed of its dirt, and drudgery next

Nokol burns oil: leaves no dirt: fit any modern furnace—steam, hot water or hot air; makes it practically self-tending in operation.

A thermostat controls Nokol's in-termittent action; set the thermo-stat; Nokol delivers uniform heat; automatically; all the time.
