

MINISTER DISCUSSES HIS WIFE'S TROUBLES

Rev. A. H. Sykes, former pastor of the Watkins Park Presbyterian church, Nashville, Tenn., says: "After seeing what Tanager has accomplished in my wife's case, I am convinced that it is a medicine of great power and extraordinary merit. I do not think I have ever seen anything give such prompt results. Mrs. Sykes has been in delicate health for ten months, suffering from stomach trouble and nervous breakdown. I frequently sought medical advice but Tanager is the only thing that gave her any relief. After taking the medicine only a short time, she was able to sit up and help with the household duties. I think it only a short time until her health will be fully restored."

"Tanager is sold by leading druggists everywhere." Advertisement.

Important to all Women Readers of this Paper

Thousands upon thousands of women have kidney or bladder trouble and never suspect it. Women's complaints often prove to be nothing else but kidney trouble, or the result of kidney or bladder disease. If the kidneys are in a healthy condition, they may cause the other organs to become diseased. You may suffer pain in the back, headache and loss of ambition. Poor health makes you nervous, irritable and may be dependent; it makes any one so. But hundreds of women claim that Dr. Kilmer's Swamp-Root, by restoring health to the kidneys, proved to be just the remedy needed to overcome such conditions. Many need for a simple bottle to see what Swamp-Root, the great kidney, liver and bladder medicine, will do for them. By enclosing ten cents to Dr. Kilmer, 233 North Second Street, Binghamton, N. Y., you may receive sample size bottle by Parcel Post. You can purchase a full size bottle at all drug stores. Advertisement.

Planes to Aid Surveyors. Railroad engineers in the future when making reconnaissance surveys in unknown countries will find the airplane a great saving in time and money. An aerial survey of a proposed Philippine railway showed the possibilities of the method.

Tractor to Improve Roads. Contraction invented by Colorado Man is intended for Smoothing and Compacting. The Scientific American in illustrating and describing a tractor for improving highways, the invention of J. Moore of Hialeah, Colo., says: "The tractor is for use in soft roads, as for instance in snow or mud, where the tractor is driven by an endless belt traveling about a fixed element and engaging the ground on the

ROAD BUILDING

ITALY WANTS BETTER ROADS

Experimental Institute Promoted for Study of Materials for Improved Highways.

The Italian Touring club has recently promoted an experimental institute for the study of materials employed in the construction and maintenance of highways.

The objects of the institute will be to carry on laboratory experiments on the physical and mechanical characteristics of road materials; to help the progress of experimental techniques which include working up by reproducing and studying samples of pavements worn by traffic or deteriorated otherwise to form a collection of material samples suitable for Italian road construction; to collect all descriptive and statistical matter pertaining to Italian roads; to furnish public bodies with useful advice relating to construction and maintenance of roads, and to forward by every other means the development and betterment of road work in Italy.

The institute publishes monthly reports of its proceedings. The institute is financed by annual contributions from the Touring Club, Italy, by an act of subsidy from the ministry of public works and by annuities, gifts and charges for material tests.

The institute is under the direction of Ugo Vanoni, formerly chief engineer of the province of Milan. More detailed information regarding the formation of this institute will be given in a future issue of the Permanent International Association of Road Congresses.

TRACTOR TO IMPROVE ROADS

Contraction invented by Colorado Man is intended for Smoothing and Compacting.

The Scientific American in illustrating and describing a tractor for improving highways, the invention of J. Moore of Hialeah, Colo., says: "The tractor is for use in soft roads, as for instance in snow or mud, where the tractor is driven by an endless belt traveling about a fixed element and engaging the ground on the

under side of said element, and having means for preventing slipping of the belt and wherein front wheels are provided for steering and for the propelling means, and wherein cleaning means is provided for the belt and front wheel."

HARD ROAD IN NEW ZEALAND. Sum of \$146,000 to Be Spent in Construction of Strip of Concrete Six Miles Long.

Approximately \$146,000 is to be spent by the city of Wellington, New Zealand, in building a concrete road, 25 feet wide, to the suburb of Duxton, which is six miles distant.

The new paving will occupy the center of a thirty-foot wide roadway which is now macadamized. Only vehicles, such as cars, motorcars and small motortrucks will be allowed on the concrete way. In addition to the present one, will be levied by Wellington, the proceeds of which will be devoted solely to the upkeep of this road. This tax applies to all motor-driven cars, and among them are also included motorcycles.

IMPROVEMENTS ARE TO COME

Establishment of Motortruck Trains Bound to Cause Reconstruction of Surfaces.

With the establishment of motortruck trains operating on a fixed schedule throughout the country, improvements are bound to come. Not only will surfaces of the highways be rebuilt, but in many instances routes will be shortened to save time and money.

These improvements should be regarded as vital to the success of every community and as a necessary factor in the prosperous era before us. They represent benefits in which not a few individuals but the community at large will share.

TECH' HIGH ENGINEERING

Schools and colleges throughout the United States are to be enlisted in a national way to teach the coming generation all about highway engineering, automobile transport, traffic regulations and safety.

Dixie Highway Leads. Of the 9,000 miles of roads to be constructed throughout the United States through the aid of federal appropriation, the Dixie highway leads the list with 855 miles.

Good Mixture for Growing Chickens. A good mixture for growing chickens consists of three parts cracked corn, two parts wheat and two parts bulled oats.

2,800,000 Miles of Roads. The American highways, which comprise 2,800,000 miles of roads, would encircle the globe 100 times.

Essential for Chickens. Grit and oyster shells should be provided so the chicks may help themselves whenever they wish.

MILK FOR YOUNG CHILD IS URGED

How Lime and Vitamines Promote Growth and Bone Development in Children.

RATS USEFUL IN ILLUSTRATION

Rodents Given Milk Grew Large While Those Without Were Weak—Tea and Coffee Not Favored for Youth.

(Prepared by the United States Department of Agriculture.) "What a lot of milk you use," exclaimed Mrs. Olds, watching the milk man place four quart bottles and a pint on her neighbor's step. "What on earth do you do with it all?"

"Mrs. Newsum looked somewhat astonished," when she replied, "I drink most of it, of course. A pint and a half a day of a glass each meal for each of the three children, the pint for grandmother, a glass or more each for Mr. Newsum and myself, and the rest for breakfast cereals, coffee and cooking. In fact, I often have to buy an extra bottle if I want to make a pudding. Tom, especially since he has been on the high school athletic team, very often uses a glass or two more than I allow for my own use."

"Some children Do Not Like Milk." "Goodness, my children wouldn't drink milk if I paid them. We only take two quarts a day, and hardly ever use all of that." My family's larger than yours, too," Mrs. Olds reflected. "Seven of the children at

least," when she replied, "I wonder," she said finally, "whether the small amount of milk the children have had would partly account for the easily broken bones in our family? Three of the children have had fractured arms or legs—and that's back some six weeks."

"It seems probable, though, one can't say positively, of course, Mrs. Olds. The longest experting contained my milk alone and really we should not be surprised that these half-grown rats would have done the same when they had all the milk they wished."

"The lecturer closed as the stuffed rats, which were absolutely lifelike, and the mounted skeletons. The milked rats had firm, well-formed bones, because they got just the amount of milk as the poor little undernourished ones had such frail skeletons that some of them had to be exhibited in bottles instead of being mounted."

Causes of Weak Bones. Mrs. Olds looked very thoughtful. "I wonder," she said finally, "whether the small amount of milk the children have had would partly account for the easily broken bones in our family? Three of the children have had fractured arms or legs—and that's back some six weeks."

"It seems probable, though, one can't say positively, of course, Mrs. Olds. The longest experting contained my milk alone and really we should not be surprised that these half-grown rats would have done the same when they had all the milk they wished."

"It seems probable, though, one can't say positively, of course, Mrs. Olds. The longest experting contained my milk alone and really we should not be surprised that these half-grown rats would have done the same when they had all the milk they wished."

"The lecturer closed as the stuffed rats, which were absolutely lifelike, and the mounted skeletons. The milked rats had firm, well-formed bones, because they got just the amount of milk as the poor little undernourished ones had such frail skeletons that some of them had to be exhibited in bottles instead of being mounted."

Causes of Weak Bones. Mrs. Olds looked very thoughtful. "I wonder," she said finally, "whether the small amount of milk the children have had would partly account for the easily broken bones in our family? Three of the children have had fractured arms or legs—and that's back some six weeks."

The lecturer explained that the condition of the rats illustrated the good effect of adding milk to an inorganic diet. The rats fed on milk, you see, grew large and muscular, with strong bones, bright eyes and glossy hair. Those that did not have milk to eat to their diet had weak bones, because they lacked minerals, especially lime, which is so abundant in milk, and also milk proteins, which are unexcelled for the construction of muscles. They also lacked vitamins, the important food accessories so essential to growth and health. Poor little things, they did not gain, but usually lost weight while comrades in the next cage thrived, and in six weeks had more than doubled their weight at the beginning of the demonstration.

The lecturer explained that the exhibit was not an experiment, because the facts had already been proved by experimental evidence. It was merely a practical illustration.

"Of course," went on Mrs. Newsum, "we know perfectly well that a baby will double its weight in six months on milk alone and really we should not be surprised that these half-grown rats would have done the same when they had all the milk they wished."

"The lecturer closed as the stuffed rats, which were absolutely lifelike, and the mounted skeletons. The milked rats had firm, well-formed bones, because they got just the amount of milk as the poor little undernourished ones had such frail skeletons that some of them had to be exhibited in bottles instead of being mounted."

Making History.

INFANT MORTALITY in past ages has been something frightful, something almost beyond belief, and even today it occupies the time and the mind of leading physicians in all countries. The death rate among infants is being gradually reduced through new methods of hygiene, new preventatives and new remedies for infants. This reduction in the death rate has NOT been accomplished by adapting the precautions taken and remedies used by adults. Rather has it been to keep clear of the old methods, and choose after long research the precautions and remedies specifically applicable to infants.

This being so, is it necessary for us to caution mothers against trying to give her baby relief with a remedy that she would use for herself? Will she remember that Fletcher's Castoria is strictly a remedy for infants and children?

Thereby Promoting Digestion, Cheerfulness and Rest, Without Purging or Laxative Effects. It is a Harmless Substitute for Castor Oil, Purgative, Drops and Soothing Syrups. Doctors who know what is safe and best for babies have only good to say of it.

Don't neglect your baby. Get a bottle of Fletcher's Castoria and give baby a few doses of it. See how the little one smiles at you as if trying to thank you for helping it. Soon you will learn to depend on Fletcher's Castoria, made just for infants and children, and of course you would not think of using anything for them that was not prepared especially for infants and children. So keep it in the house.

GENUINE CASTORIA ALWAYS Bears the Signature of

Chas. H. Fletcher. THE CENTAUR COMPANY, NEW YORK CITY.

One Good Result From War. The war added in stopping the progress and diffusion of yellow fever by preventing travelers from entering epidemic areas and carrying out the disease.

Cuticura Soothes Baby Rashes. That itchy and burn with hot baths of Cuticura Soap followed by gentle anointings of Cuticura Ointment. Nothing better, purer, sweeter, especially if a little of the fragrant Cuticura Talcum is dusted on at the finishing, the each-savory-whole.—Advertisement.

IF IT HADN'T BEEN SUNDAY. Cook Certainly Would Not Have Overlooked the Use of That Insulating Pronoun.

The ritual of society as women make it is very exciting the world over, even in its minutiae. In this relation there is a story showing the serious difficulty that arose among a set of workhouse officials in a Western town.

The infirmary nurse, three in number had demanded a separate sitting room and the delight of Stables' cook for their own use.

"Well, Mrs. Jones, she comes down and gets inside the door. 'Four plates,' she says. 'Four? What's the fourth?' 'Me,' says I. 'You're she,' she says, and with that she tosses her head and walks away.

Here the cook drew a long breath, but then continued: 'If it hadn't been Sunday, gentlemen, I should have let her have it for calling me 'you'!'—Exchange.

Not Quite Alone. Bobbie had been pouring scorn on girls and their ways till his little sister came along.

"Gee!" said Bobbie. "You've no pluck! You aren't got into that dark room by yourself."

"I dare! You just come with me and see me do it!"—London Weekly Telegraph.
