New Nose Veils Are in Shape of the Half-Moon

Nose veils for women are new, pretty and economical. They are small, in half-moon shape, to be worn with small hats. The straight line goes around the hat and the curved part comes just under the nose or possibly just covers the lips. They suggest the small mask of other days which figures in many romantic stories, and are quaint. They come in some simple mesh with a little border around the curved edge, and in different shades of brown, in gray and black. There are a few which come with more elaborate all-over design. Being small, they take little material and are, therefore, less costly.

Lingerie Dresses Are To Be Summer Fashion

The calico dress is setting its imprimatur on all fashions. It is the new print known as calico from Calcutta, a name used during the early Victorian period when the queen first became mistress of India. It is a big English Vogue began for printed stuffs. These calico effects, notes a fashion writer in the New York Tribune, are the antithesis of the Calcutta cotton prints, as this so-called calico of East Indian origin is done not only with prints but with an exquisite embroidery and delicate patterned braids; all of which follow the Oriental tendency from a point of mixed color and design. (Detroit)

Lingerie is showing dresses which are solidly established and she often includes a solidly embroidered jacket, Marie's Chanel, who is one of the most popular authorities on dress, is showing entire costumes covered with fine soutache, not the old-fashioned black soutache but lovely beige, brown and café au lait tones intermingled with designs worked out in the new fluorescent tones. When first seen one quickly knows what to make of these soutache dresses. They look different from anything heretofore seen. They are tremendously expensive and thus will be more or less exclusive.

New calico effects are worked out with infinitesimal cross-stitching in multicolors done on a soft neutral crepe de chine. These dresses seem to hold within themselves a thousand points of scintillating lights. The stitching are in metal, and the colors so intermingled that one thinks of fabric rather than embroidery.

As for prints, there is no limit to the calico effect on printed crepe de chine, crepe marocain, crepe mousseline, silk jersey, every weight of cotton crepe, voiles, all the sponges and blouses and things are printed. Thus there are dresses and wraps, hats, handkerchiefs, halloges, peignoirs, pajamas that are printed. Parasols and fans are made from printed stuffs; jewelry and other ornaments of painted porcelain, enamelled glass and metal are lacquered with levels in metal effect.

Shoes are being made with bright bits of color. Stomping cloaks are embroidered in multicolors and shoe buckles are in bright enamel, metal and porcelain, also in silk embroidered patterns, imitating these prints. One wonders just how far the riot of color will reach.
