The survivors was a transmitted the cartely was about the cartely

### BETTY BENSON'S

By Western Resembler Usines.)

THE man numbered along the bank. He had decide that fishing in the old pool would be as good a way as any to pass his space time. Business had brought him to an adjoining city, and impulse urped him on to the town which, had been lish youthful home. Though he had not in the recesses of his heart confessed, the constantly recurring memory of an old-time seven heart never replaced mappiles. It was offernessed to the constantly received the seven heart never replaced mappiles. It was off Betty that he was thinking—Betty of the dimpling smile and serene blue eyes. He had been certain that Betty feturated the love that had grown with its youth. She liked big Tom Benson, he knew. He doubt had hopefully impered a later notice in the Lynden town paper, which be home to the seven had been married; the paper said, "Miss Betty Baines," the paper said, "had been married; the previous evening to Mr. Thomas Benson of Lynden village."

Suddenly Richard's musings were reliefly interrupted. He jumped to his feet. Beneath his gaze, there in the waters, a small form struggles were reliefly interrupted. He jumped to his feet. Beneath his gaze, there in the waters, a small form struggles interrupted. He is the waters as an and form struggles and the stream. And presently he sat with the child in his arms on the grassy bank.

"Mother told me." he calmiy admitted, "not to go in swimming. My

commands and the state of the s

standing?"
"He saved my life just now."
"He saved my life just now."
Tommy suggested helpfully. Betty's

Change Always Going On.
Growth is the regular order of business. It applies to everything. Nothings remains kationary. It grows or decays. There is a constant change going on, even in us.

Inadequate Functioning of Federal Agencies for Veterans' Relief

By J. A. McFARLAND, Commander Disabled American Veterana

WILE one of the prime objects of the Dhabled American Veterans of the World War is to avoid friction with any other veterans' group or with congress, we feel that our member-ship roll vecrans of the World War is to avoid friction with any other veterans' group or with congress, we feel that our membershap roll, composed exclusively of men disabled in fine of day, has given as a power that will do much to solve the unsatisfactory functioning of the federal agencies having to do with the reliet of the war's

The hospitalisation situation is unsatisfactory. There are \$2,000 mon abroad in the land who have been discharged from hospitals as having reached the maximum improvement, but whose mental or physical condition is still such that they cannot be vocationally trained. We want those men provided for by being given a temporary and total compensation rating until they are in condition to do for themselves. There are 19,000 men in jails, many of whom are admitted to be so deranged as a result of service that they were not fully reponsible for their acts. We want these men surveyed and given treatment rather than incarrestion. There are groups of parasites who are daying fake magazines and organizations to rob the public of millions in organizations under the guise of reject for the disabled. We want the Department of Justice and the Post Office for the disabled. We want the Department of Justice and the Posit/Office department to put them Jour of action. There are hundreds of this tubercular and mental cases that have been in the hospitals two or three years. We want all sacen who have been in the hospitals upward of one, year declared permanent and total, so they may get payments on the insurance they took out during the war.

insurance they took out during the war.

There is a movement on treduce pay of men in training and we will fight this to the limit of our strength; we want the investigation of the inefficiency of the Vejerans' bureau made thorough and speeded our and we want the Civil Service commission to give proper, credit for all men who have been declared rehabilitated by the Veterans' bureau.

### secesses secesses secesses secesses secesses secesses sections Leavened Bread May Be Made From Materials Other Than Wheat and Rye

By C. L. ALSBERG, in Journal of Industrial and Engineering Chemistry.

"Since agriculture and food manufacture are essentially forms of abplied biochemistry, physical chemistry has made possible great advances of immediate practical usefulness. Without physical chemistry our preent-day conceptions of the equilibria that prevail in soils and in the soil solution would be impossible.

"An increase in our knowledge of the behavior of colloids and of emulsions is destined to influence profoundly the world's methods of food production. For example, wheat owes its pre-eminence as a bread grain in large measure to the fact that it contains a mixture of proteins known as gluten, which, when mixed with water, forms a tenacious, elastic mass For this reason wheat and, to a less degree, rye, alone of all the grains

Because of the physical qualities of gluten-its toughness, its distensibility and its coagulability by heat—it is possible to produce leavened bread. These qualities of gluten do not depend primarily upon the ar-rangement of the atoms in the molecule but rather upon the physical con-dition of molecular aggregates.

"It is not too much to hope that physico-chemical research upon colloids will one day enable us to control the colloidal state to such an extent that we can give to a colloid essentially those physico-chemical properties that we desire. If this can be done, and there is no inherent impossibility in the idea, it may be possible to give to other proteins beside gluten the

"When that time comes, leavened bread will be produced from materials or grain other than wheat and rye. What this would mean to the food supply and the future of the race is obvious."

#### However Powerful a Nation Is in the Air It Cannot Prevent Air Raids

By H. G. WELLS, English Writer.

By H. G. WELLS, English Writer.

It is useless for England to defenth herself against air raids by building up a transaction are fleet. All weeken do is to reclainte and wipe out our enemies if possible. In the war of the future one bomb will/wipe out the inhabitants of a small town, and a rain of bombs will destroy every living thing in a large city.

When that stage is reached, the profession of arms, will be reduced to absurdity. No one, either combatants of noncombatants, will survive. For all we can tell, civilization may end in smoke and dust.

To arm, therefore, in such a fashion, in not to defend this country from attack by air, for the country is very indefensible. Some who are campaigning for larger air forces are under the impression that the only way to avoid air raids is to be strong in the air.

way to avoid air raids is to be strong in the air.

That is an absurd contention. However powerful a nation may be in the air, it cannot prevent airplanes of a rival country from penetrating its defenses.

I do heartily believe in research into all matters connected with aviation, for aviation is the coming transport of the future and a tremendous advance in air travel is inevitable.

<u>इत्तरक्रक्तरक्रक्तरक्रक्तरक्रक्तरक्रक्तरक्रक्तरक्रक्तरक्रक</u> Women Crowding to the Front in Sports, Closer to Championship Laurels

By ETHELDA BLEIBTREY, American Swimmer

Hundreds of women are crowding to the front in sports creeping closer year by year to the championship laurels that until now any been worn exclusively by men in all lines of athletics. I predict that Miss Bauer's swimming record definitely marks the beginning of an ear when the world's sport crowns will fall, one by one, before the conquests of the "weaker sex," and that eventually women will wear as many of these prizes as more than the world's sport crowns will fall, one by one, before the conquests of the "weaker sex," and that eventually women will wear as many of these

In golf, women are slowly but surely driving to the front In goil, women are slowly out surely driving to the from:
In tennis, one of the first games women took up, man's appremacy
is being threatened. I am quite sure that Molla Mallory or Suranna
Lenglen could defeat all but two or three of our best men players. Experts predict that Miss Helen Wills, fifteen-year-old star, will eclipse both
Mrs. Mallory and Mademoiselle Lenglen.

Mrs. Mallory and Mademoiselle Lengien.

Women are steadily gaining on men in baskethall, offsetting man's natural superior weight by their greater natural significant transverse. School-girls can now run the 10h-yard dash in 12h seconds or better, as compared with 10 1-5 seconds for boys of the same age.

Mrs. Minnie Maddern Fiske, American Actress. The English Janmrs. Minne Maddern Fisse, American Actress—The English am-guage is neglected by our actors today, although it is the most important instrument of expression that they have, say valuable at the violin to the violinist. One hears as slovenly English on the stage as on the street and the elder players are called pedantic by the new generation simply became they speak correctly.

Sir William Orpen, British Portrait Painter.—I. welcome any new movement in art. It wakes up the people. Gets the artists out of rust. Limbers them up. I thoroughly believe in them, whether they are cubical agitators or anticubist agitators or any other kind of art agitators.
