

Why do we shiver? —because when the body chills the nervous system puts the muscles in motion. This "exercise" drives the heart faster and hastens the flow of warm blood. A rub with Puretest Rubbing Alcohol beats a shiver every time as an aid to circulation.

Excellent for limbering up athletes and delivering strains. Immediately removes perspiration odors. Adopted by leading athletic clubs, hospitals and training camps throughout the U. S.

One of 200 Puretest preparations for health and hygiene. Every item the best that skill and conscience can produce.

Production of Motor Cars in Big Volume Requires Vast Resources and Facilities

Top picture shows Plant 2 of The Studebaker Corporation, South Bend, where the Light-Six models are manufactured complete. The middle view shows Plant 1, also at South Bend, where the open and closed bodies, springs, windshields, etc. for all models are made.

STUDEBAKER'S production record of 110,540 cars for the first eight months of this year—surpassing the record for the entire year of 1922—has caused wide comment in motor and business circles.

Notable among these plants are the immense new factories at South Bend, Ind., in which the Light-Six models are manufactured complete.

The sub-assembly building, where the various units themselves are assembled, is four stories high, of reinforced concrete construction.

The Studebaker Light-Six is a striking example of a car and every detail in connection with the arrangement of the various factory buildings, the selection and placing of machinery and stock has been inspired by the desire on the part of Studebaker experts to make the factory the Light-Six on the most economical and efficient basis, and to give the purchaser the benefit of savings effected.

The great building that houses the stamping department which represents an investment of \$1,000,000, is of steel-frame construction, with tile roof and glass curbsides.

Visitors who make the trip through the Light-Six factory always like to linger in this department, watch the interesting processes performed—variable times as they seem—and study the remarkable economies in operation, as well as the perfect accuracy and utilization with which each task is completed.

When the last of these units is hung upon the carriers, the actual assembly of the complete car begins, under careful and expert supervision, an improvement upon the former method of long drawn-out, piecemeal assembly.

Community News

Calendar

Friday, Oct. 12. Mabel Hill, of E. W. Miles, Interpretive, Classic, Ballet and Fancy Dance. Private and Class Lessons.
