ROLL a cone of stiff paper. Stick a nail or pencil through the middle for a handle (as above). Hold large end down and touch a match to it. Note how the smoke pours out the small end. This method of coal combustion compares with an under-draft stove or furnace. There is a fuel waste of about 60%.

Cole's Hot Blast Furnace

Cole's Original Hot Blast Combustion eliminates this serious loss. It mixes air, which is free, with these gases otherwise wasted and forces them back upon the fire, where they are completely consumed. It burns 20 pounds of air to every pound of coal, and thus gets every particle of heat out of the fuel.

English Telephone Salutation One of Many That Sound Queer to Americans

"Are you there?" says the Englishman when he answers a long distance call, and presumably if you are not, then you don't talk.

It is in Spain the telephone salutation of the subscriber is "Oiga!" meaning "I hear," to which the operator responds "Diga," which means "I say."

ONE REASON FOR REPORTS OF "TELEPHONE OUT OF ORDER"

In replacing the telephone receiver on its hook hurriedly after a telephone conversation, it happens sometimes that the receiver is allowed to rest on a hook or other object, so that the book remains elevated just as it was when the receiver is off the hook, and as a result, the electric light on the switchboard does not flash to notify the subscriber has finished.
