

Cool In Summer and Warm In Winter

BUILD the walls of your home by the All-Crete System and you will have a home that is unusually cool in summer and remarkably easy to keep warm in winter.

The All-Crete System is a new method of constructing buildings of concrete, making it possible to erect hollow concrete walls by pouring the concrete, leaving a dead air-space in the center which resists the passage of heat and cold.

If you are planning on building a new home, send for information about the All-Crete System and learn how you can make a sub-stantial saving in building costs by following the All-Crete method.

PUBLIC NOTICE!

It appears that some people of this community are not fully familiar with the activities of the Credit Bureau. Therefore, the members have appropriated this space for a brief explanation.

The Credit Bureau was organized June 24, 1925, by business and professional men in all lines who do a credit business. It is owned and operated by them for the benefit of the community at large.

WHAT IS CREDIT?

Credit his deterred payment. A business or professional may exchanges his service of merchandisq in return for your promise to pay. Whenyou have an open account you are given the equivalent of money. Credit is a business necessity. The retailer, the wholessaler and the manufacturer could not maintain their volume of business without credit. If the retailer does not play his bills, and the manufacturer would be unable to met his obligations, the tresult means a slump in business and the manufacturer cannot payemployed or bills for material and the working people suffer from enforced idleness brought on by people who do not respect their obligations. An unsafisfied account is not only injurious to yourself and your creditor, but you can easily understand how it affects the findness of this great nation when many ignore the necessity and importance of their credit transaction.

HOW IS YOUR CREDIT?
