BIGGER BUICK PLANT NEARING COMPLETION

The new Buick engine plant which is being enlarged to increase production to 1200 cars a day, is nearing completion. The building is ready for use except for the electric wiring, painting and the installation of a sprinkler system. The addition to this plant is the \$1,000,000 expansion program recently started by the Buick Motor Company, made necessary by the universal demand for the new models introduced in August, 1925. When completed, the additions to present facilities will make a yearly production of 300,000 cars possible. At present the factory is straining every resource to meet the demand for cars. It is expected that some machinery in the enlarged plant will be running by next Monday morning. Other steps in the program to increase capacity are rapidly being developed. One of the largest shipping months ever had by the Buick Motor Company was finished December 31 by a record when 474 cars of Buick automobiles were shipped from the factory in Flint for all parts of the country.
