Leads the World in Motor Car Valu

ow many main bearings in your motor car? Nash recommends

Because for the finest and smoothest performance results you need 7, rather than 3 or 4.

Obviously, 3 or 4 supports for a chanks aft cannot give it the rigidity and smoothness of 7. That is why Nash—with customary engineering progressiveness—has developed the 7 bearing motor for all Nash models.

The 7 bearings of Nash achieve power-smoothness and quietness, and achieve it, imoreover, with no sacrifice of acceleration. Is fact, the proper support of the crankshaft decidedly improves the energy and aggressiveness of the car.

Here is another fact to remember about the 7 bearings of Nash: They have more bearing surface, by actual measurement, than any 6-cylinder engine of similar size and price; no matter, how many bearings it has. (Actually 20 square inches more than leading cars with fewer bearings.)

When you buy your 1927 motor car be sure to ask. "How many man bearings?" And for better results choose the car that has 7. Nash offers you this performance-advantage in every single model, whether you pay \$2090 for it or only \$856.
