Two New Parts in DODGE BROTHERS MOTOR CAR Tell Important Story

The small part is a new exhaust valve—now used on all Dodge engines. Also on all fine aeroplane engines. Made of alloy steel, containing silicon and chromium, it costs four times as much as the valve it replaces.

The other is Dodge Brothers new five-bearing crankshaft. Made of costly chrome vanadium steel. One of the finest shafts in any engine.

FEACH TELLS AN IMPORTANT STORY

The small part typifies hundreds of similar refinements made by Dodge Brothers during the past two years ... endless detailed improvements, never spoken of, rarely observed by the layman, but vitally important in their total effect on performance and dependability.

With the new crankshaft, many other major improvements could be listed. A new salent-type clutch. A new two-unit starting system. Smarter and stauncher body design. Bright new colors. Comfort-tilt seats. New silent-type muffler/ New steering ease. Softer pedal action. New air cleaner. Improved engine mounting. New design propeller shaft, differential, axle shafts... and many others.

Drive the car now! Experience its new zest and flexibility—marked ease of operation—pronounced comfort—and the striking newsmoothness and silence of the motor at all speeds!
