HUDSON ACTS AS SWITCH ENGINE

That the 108 horsepower available in the standard Hudson car is right there ready for use when needed was aptly demonstrated the other day when it was necessary to move two box cars up to the loading platform at the Hudson factory and no switch engine was available for the purpose at the time.

A chain throws over the axle of the freight car and around one of the big husky cross members of the frame of the Hudson, plus the application of a bit of that 108 horsepower did the trick. The two box cars were towed away to their appointed positions without trouble.

While the owner will never be called upon to tow box cars in his daily use of his car, Hudson officials point out that this ability to move several tons of freight equipment over the rail proves a lot not only as regards the power of the engine, but the ability of the clutch, transmission and rear axle to really "take it."

CHIEF ISSUES GRASS. ROOF FIRE WARNINGS

A double warning, intended to reduce the number of roof fires and to prevent children from being burned by grass fires, has been issued today by Fire Chief Vernon W. Griffith.

"Whenever rubbish and papers are being burned in a furnace, the dampers should be kept closed as much as possible," Chief Griffith said. "Also, this burning should be done only when the roof is wet."

"Children become easily excited when near a fire, and they are so small that they may become enveloped by the flames before others realize the danger," he pointed out.
