Put in a bag and let drip over night. Next morning put vegetables in a porcelain vessel and cover with sweetened spiced vinegar. The SNAPSHOT GUILD
 SUMMER SUNSETS

Silhouettes against the sunset make striking snapshots.

SUMMER'S gorgeous sunsets are splendid snapshot material, and pictures are easy to take, whether you have a simple box camera or a high-grade folding camera with ultra fast lens.

Character silhouettes of persons can be made with the sunset as background, and sunset shots are a lake or stream, with reflections over a mountain range. The effect of a sunset is heightened by a foreground, such as a "frame-of-trees" over hanging leafy branches. In the country, try shooting the sunset with a piece of farm machinery silhouetted against it. A plowing scene, with steaming horses although sunset is not the best time for a successful snapshot.

One of the most important points in photographing sunsets, is to obtain a clear, vigorous cloud effect. Good clouds are often better than a riot of brilliant color, at least for black and white picture purposes. In many cases a more striking result will be obtained if you place a color filter over the camera lens. The filter brightens its own colors, and darkens its opposite or complementary colors. When in doubt, shoot one picture with the filter and one without. A good sunset is worth an extra shot or two.

Either chrome type or panchromatic film is excellent for sunset pictures. Short exposures are desirable, in order to subdivide detail in the foreground. If yours is a box camera which has a choice of lens openings, use the smaller opening. With rapid lens cameras, try an exposure of 1/16 at 150 or 100 seconds. If the sunset is quite bright and you are shooting across water, you may get an opening as small as f/22.

Watch the sunsets—keep your camera loaded—ready for action—and you will add many a charming snapshot to your collection.
