Light your kitchen like this one

...for a cheery, more efficient place to work

Kitchen work sails along faster with good lighting. No energy is wasted in trying to see—there is no fumbling or groping in dark corners, no mishaps due to uncertain vision in shadowed working spaces. Good lighting can make your kitchen bright and pleasant, as cheery as any room in the house. When you spend so many hours in the kitchen, you want the room to be light and attractive—not dark and gloomy and depressing. Good lighting is a great help to

speed your work alone and conserve your energy. The average kitchen can be well lighted—like the one

above — with one 150-watt lamp in the center ceiling fixture, and 60-watt lamps in small brackets over the range, the sink and the working surface. The cost of lighting your kitchen

in this way is only about a cent an hour. If you have a small kitchen, a 100-watt lamp may be used in the center ceiling

Now in the dark winter months, especially, you will appre-
