

Quarton Committee Submits Report on Junior High

Following is a summary of the Quarton School 7th-8th grade issue as reported to the Quarton P. T. A. in a meeting held Monday night. Mr. William O. Jeffrey, Jr., is president of the organization.

A delegation met with the Board of Education Tuesday night and discussed the matter further. An article starting on Page 1 repeats the Board's action.

The Objections
There are six objections the parents have to the present plan of having the 7th and 8th grades at Baldwin.

factory. Used by visiting teams one day and the next day by the girls without any form of disinfection, it was considered sanitary.

The Difficulties
These are the difficulties in making the changes:

"Parents will not have an opportunity to play at the High School band. However, Baldwin and Adams which are full-time grade-homes have their own bands, and perhaps these could be worked out for Quarton."

"It was suggested that boys of this age need a man teacher to direct the band and gym teachers. This is probably true, but at Baldwin the manual training teacher is the only other one they have. The committee has recommended that one of these teachers be a man."

"The dining room and main entrance to the school are in the rear of the building. The present dining room is in the front of the building. The present dining room is in the front of the building. The present dining room is in the front of the building."

ready offered there for students coming from other schools without manual training.

Music Rehearsals
It was also pointed out that the additional use of the gym would be possible for use for music rehearsals.

"The probable cost of necessary equipment was to be determined definitely at a later date."

"This is the proposed plan if the matter remains at Quarton."

"The subjects taught and the number of periods weekly—English, 2 periods; mathematics, 2 periods; manual training, 2 periods; science, 2 periods; history, 2 periods; music, 1 1/2; physical education, 1 1/2."

Women have invaded another field of service to be exclusively men's work. They are shown here in the kitchen of the Quarton school, preparing a meal for the staff.

the rooms will be necessary. The two best substitutes for the cafeteria and the library. The cafeteria which is 4 1/2 by 12 ft. has never been used for its original purpose. The dishes are not washed and the tables are not cleaned. Children who bring their lunches can't work out in the cafeteria.

It would make a good room for science classes with the facilities at Baldwin. The room would be used as a laboratory for the study of the life sciences. The room would be used as a laboratory for the study of the life sciences.

Cafeteria and Library
The cafeteria classrooms will be added making a total of 3 teachers and 100 seats. The cafeteria classrooms will be added making a total of 3 teachers and 100 seats.

Population Increasing
The population of the Quarton and Pierce areas is increasing. The population of the Quarton and Pierce areas is increasing.

Bowling Tourney Offers Newcomers Great Chance
BY ART BRONSON
DOWN the sports trail the annual tournament of the American Bowling Congress is being held on St. Paul March 21 offers a chance for newcomers such as is present in no other sport.

Almost 5800 teams will compete for the world's ten pin title on green alleys, with new pins in average surroundings and under the pressure of stiff tournament competition.

But it is the A. B. C. tournament, which ends on May 6, follows the course of past events, several neophytes will make names for themselves.

Ray Brown of Terre Haute, Ind., ran up a total of 73 pins for the singles crown in his first A. B. C. tournament last year. Three other singles winners in tournament history were competing for the first time. Many another bowler has made a name for himself by rapping out a fine series in one of the team events.

Because of the terrific types of competition, the A. B. C. has few repeaters. The champions are always knocked out. Freddie Fischer, Father of Buffalo, N. Y., who who the coveted all-events championship last year at Detroit, after trying for 25 years, is going back determined to win 100 in a row—a feat never before accomplished—but his turfs are stacked against him.

RIDE THE GREEN BUSES
Take the Green buses to and from the Shrine Circus. No parking problems or expense.

EASTERN MICHIGAN MOTORBUSES

Link Trainer Used in U. of M. Course

ANY AIRBORNE flight training without ever leaving the ground is made possible at the University of Michigan's civilian pilot training course through the use of the Link Trainer.

The Trainer is being used at Michigan in an experiment to determine the value of this type of training in preparing students for flight under the Civil Aeronautics Authority Program for securing pilot licenses.

It is found that students trained in the Link Trainer are able to handle the controls of a real plane with less difficulty than those who have not been trained in this manner.

The project is being financed by the Federal Government and is being directed by the Civil Aeronautics Authority.

Although 26 other states have more land devoted to agriculture, only 13 have greater farm production. As a milk producing state, Michigan stands eighth with nearly 1,000,000 dairy cattle.

"A State with Riches Blest"
WE LIVE in a great country. But among all the 48 states there is none that can lay claim to more varied and abundant riches of field and orchard, farm and mine, than our own Michigan. Here an unequalled combination of soil and climate, mineral deposits, waterways and harbors, and the progressive spirit of five million people, has enabled agriculture and industry to flourish together, each aiding the development of the other.

This is the first of a series of informative advertisements in which the Michigan Bell Telephone Company will deal with the immense natural resources of the state, affecting the daily lives of all our citizens.

The telephone has contributed vitally to Michigan's growth. Just as good roads, cars and trucks have made it easier to transport our products, so the telephone has aided the development of our resources by shortening time and distance.

It brings producer, distributor, manufacturer and consumer closer together—minutes apart instead of days—and does it so cheaply that millions of dollars are saved annually.

MICHIGAN BELL TELEPHONE COMPANY
