Synthetic Rubber Strides Are Rapid

Rapid strides are being made toward the production of synthetic rubber, Legrand Daly, head of the engineering laboratory on South Adams near Woodward, told the Exchange Club in a talk Tuesday.

Daly, who is perfecting new uses for the non-metallic plastics, predicted that two million tons of rubber would be produced during the next two years, compared with the use of 800,000 tons of natural rubber in past years. However, he made no prediction as to the time when synthetic rubber would be readily available for civilian use.

He favored the production of rubber from alcohol, which can be made from wheat, wood and waste products. Soyezu Goh, a Chinese scientist who was sent here by his government to learn American methods, was also a guest at the meeting.

GREYHOUND CHANGES ALL SCHEDULES ON OCTOBER 15TH

—get latest information before starting any trip

* Throughout the nation Greyhound buses start operating on new schedules beginning October 15th. Although Greyhound has been preparing for this change for some time, it is not a simple thing to rearrange fully a service that covers 65,000 miles of routes and has transported more than 85 million passengers since Pearl Harbor. Until every detail of the new service is carefully worked out, you may be inconvenienced on occasion. We hope you'll take it in stride, as we're doing our best to maintain customary high standards of service under unusual conditions.

Now when every bus, every tire, every gallon of gasoline must be used to full advantage, you can help in many ways. Travel on mid-week days when possible, to avoid week-end crowding—avoid holidays and rush periods—take along less baggage than usual—and get tickets and full information about the new schedule changes well in advance of any trip.
