FROM MICHIGAN ORCHARDS With our orchards pouring forth their autumn treasure, here is a timely recipe from our Home Service Department:

Honey Apple Crisp
4 cups aliced apples 1, cup brown sugar 1, cup aliced sples 1, cup brown sugar 1, cup aliced 1, cup start 1, c Don't waste electricity during the coal shortage

ON THE NOSE ... "As accurate as a fine watch" has long been a standard phrase to describe utmost accuracy. Yet an electric clock compares favorably with the finest watch. It is never more than a few seconds off—and even this small variation corrects itself, so that there is no accumulated error over a period of time. The huge turbo-generators in Edison power houses turn in exact unison with one another, and synchronous electric clocks follow the generators. One cent a week operates an electric clock.

99.997% IS PREITY GOOD. One of our employees thoughtlessly took his vacation last summer in a town not served by the Edison Company. His faith in electric clocks remained serene until he had the sad experience of walking into church one Sunday about a half-hour late. He discovered that his clock had lost a half-hour while the power was shut off—and; t was off twice more in two weeks. Naturally, these interruptions reminded him that Detroit Edison's record of "power on" is 99.997 per cent in cities—and only slightly less in the country, at the end of long rural lines. Detroit Edison customers are so accustomed to good service that they look upon it as a matter of course, People notice the electricity supply only when it is had! We accept the fact philosophically.

Lubrication of moving parts is KEEPING COOL Lubrication of moving parts is the function of oil, most of us would say—thinking of automobiles and other machinery which operates more smoothly because of oil. But oil performs other equally important functions. Oil cools and insulates, and The Detroit Edison Company uses many thousands of gallons for those purposes. Oil provides the necessary insulation in switches and circuit breakers, for example, and the transformer on top of the pole near your home is filled with oil, although the transformer has not a single moving part.

-The Detroit Edison Co.
