Series of Dances Being Given by the Student Congress

To stimulate social activities which many have regarded as lagging during the war years, Baldwin Student Congress is sponsoring a series of dances, instead of one each semester. Formerly, Congress held dances in Baldwin gym; but it was believed the Community House would be more conducive to a large attendance.

Originally it was intended to give three dances. The "Spring Swing," given last Saturday proved a great success, and plans are being pushed for the next scheduled dance, May 6. No decision has yet been reached on the third.

Dick Adams is general chairman for all of the dances. Other holding chairmanships of various dance committees are Austin Jones, George Allen, Frances Mead, Sally Kreidler, Gerry Hughes, and Chuck Murray. Address Mrs. Carol W. Darling and Miss Alice Price.

Youth Hostel Trip To Europe Planned For Coming Summer

One hundred Youth Hostellers from the United States will go to Europe this summer. Sailing from New York the latest part of June and returning early in September, the group will visit British Hostellers and then go into Holland, Luxembourg and the French Alps to help in the re-establishment of bombed hostels.

Margaret McDaniell, assistant director of the Detroit Council of American Youth Hostels, is planning to be a leader on the trip, and several people from Birmingham and this area may accompany her.

The Proven Way
To Greater Farm Income

Mow curing of hay is a practical and efficient method of producing more higher-quality hay from the same field. It is a proven method which has been put to use by hundreds of farmers—and the system pays for itself in one season.

Hay is allowed to dry in the field for 4 or 5 hours, during which time the moisture content is reduced from 75% to 45%. The hay is then stored in the mow on the same day it is cut—and the curing is completed by forcing air through it with an electrically driven fan.

Mow Cured Hay Is the Best Substitute for Fresh Pasture

Forage crops can be cut at the right stage of maturity and cured in a way that conserves the leaves and most of the green color. The result is hay with double the protein and carotene content. In your herd this higher quality hay means better physical condition, longer productive life, greater milk production, and milk of greater vitamin content—all of which means greater profit to you.

Consult our Farm Service Advisor at the nearest Detroit Edison Office. He will be glad to give you detailed advice on a mow hay curing system especially suited to your needs.
