AUGUST AXIOMS*

SELF EVIDENT TRUTHS AND AUBVIOUS PROCEDURES

1. Grass is the most abused and ill-treated plant in our yards. It is usually undernourished, cut too short and watered too shallowly. Every time it grows too tall we cut off the top—the best producing part of the plant. Leave us be reasonable about this however. Leave us recognize that good seed is needed—like TURFMASTER but don't make it hunt for its food. Before you throw it around put down good bait like GRO-SOD... water it in... sow the seed... cover the thin and bare spots with PEAT MOSS. Water new lawns every day for a few weeks between 11:00 A.M. and 2:00 P.M. (for old lawns put a cereal head... or any antique heirloom... half-way between the sprinkler and furthest reach and keep going until there is one inch of water in the bowl.) (Don't put any cereal in the bowl.)
2. If you want magnificent blooms in your yard next Summer, plant MADONNA LILIES right NOW. These exquisite flowers, believed to be the "Lilies of the Field" to which Christ referred to in His Sermon on the Mount, have been bred in the succeeding years for beauty only (excluding their use as a balm for wounds and the sap from the lilies as a feminine cleansing agent) and such a source is the Loire Valley, Northern France where the Chateau de Naxge is located and produces these bulbs.
3. Our African Date Palms are proving for dates with people who need a bit of feathery frivolity in the shady areas of living rooms and halls. The only reason we keep working on this is because...
4. PEONY ROOTS for September planting should be ordered now. DO NOT divide old peonies unless absolutely necessary. However, try replanting those that do not flower—they may be planted too deep.
5. If young hollyhock seedlings are starting out on the town spray them with BORDEAUX.
6. Fertilize each peony clump with 1/2 pound of BONE MEAL per year of age of the clump-clump.
7. Plant COLCHICUMS now in borders and under casual flowering shrubs and trees. BUT, before you plant them set them on the mantle or piano or on a casual table (this is a very casual discourse) without water, dirt, gravel or anything and after they throw up many lovely blooms you can plant them outdoors. How can you get more for your dough?
8. If cabbage heads begin to crack bend them over so as to break the root on one side. Any "cabbage-head" would know that.
9. Most onions are not good keepers. White varieties are quickest to spoil. Yellow keeps best. Any "Onion Head" should know that.
10. Just noticed that in the vegetable garden the best watering procedure is to put on one inch of water once a week. Anyone without water-on-the-brain would know that.
11. Watch dwarf evergreens for a small green worm (he can't watch himself) and look him with BLACK LEAF 40 or MALATHION.
12. Have you ever had shingles? Well put some close to squash vines as traps for squash bugs. Early in the morning (ugh) look under them for squash bugs (ugh) and pick (ugh) them up and squash (ugh) the squash bugs (ugh!).
13. —Good Luck—
