LOOK...  
...around your area (or even your town) to find any such sites. Find out what procedures involving seed planting, fertilizing, mulching, and watering are needed.

Find out the analysis of the grass seed (especially the percentage of Kentucky Blue Grass) and the fertilizers and weed sprays you should use. This will help you prepare a good lawn for the next spring.

---

LOOK...  
...at your garden and the flowers that grow there. Would you like to have a showpiece in your yard or garden? Now is the time to plan your garden and flower arrangement. Make a list of the plants you want to grow and the plants you already have. Plan your garden carefully and make sure you have enough space for all the plants you want to grow.

---

LOOK...  
...at your vegetables garden areas and if they are in need of HUMUS, one WINTER Yume at the rate of one pound to 100 square feet and dig in the Spring—unless you like to EAT your crops! There is no humor in this. Only home.

---

LOOK...  
...over the squash and pumpkins and be sure they are thoroughly ripe before harvesting. The ripen they are harvested are better than the ones that are not ripe. Store them in a cool, dark place to ripen.

---

LOOK...  
...self in the mirror and admit that you did not know that grapes will not ripen after they are picked.

---

Look, we haven't anytime to play right now but
