HA! HA! HA!

You probably thought you could continue your "long winter's nap" for a few more weeks. But listen to what we have lined up for you.

First we want to call your undivided attention to the SLEEPING DRENCH, more familiarly known as the DORMANT SPRAY.

Leave us consider for a moment the importance of this lethargic activity.

What is meant by DORMANT? It is that period when men turn to reading Sports Illustrated; Vulcan. The Man who was born in a volcano, and Captain Billy's Whizz Bang. With plants it is when they are not growing.

You can use LIME SULPHUR or a miscible oil such as SCALECIDE lime sulphur is safe but unpleasant to use and leaves an indelible stain on painted surfaces. Scalecide might be injurious if used on other than bright sunny days with the temperature 45 degrees F. or over.

Never use SCALECIDE on beech, black walnut, butternut, sugar maple, panicles, or magnolia. Also do not use it on retinosperma, Japanese Umbrella Pine, cryptomeria—great guns! OR Douglas Fir, true firs, (for shame Douglas) hemlock, or yew. About the only thing left, it seems is edible artichoke.

If you use SCALECIDE on evergreens be sure you DON'T USE a sulphur compound in less than 30 days.

We neglected to say what a Dormant Spray is. It is a contact poison used to kill over-wintering eggs and insects hidden in the bark and in other places on the tree or shrub. It is particularly directed against:

1. Scales of all types
2. Eggs of red mites and aphids
3. Adult aphids such as spruce gall aphids
4. Pear psylla and blister mites
5. Other insects too numerous to mention at these rates.
6. Peach leaf curl is a fungus disease entirely controlled by a dormant spray. (Lime-sulphur is the stuff to use)

The second thing we call to your now divided attention is the fertilizing and seeding of the lawn.

February is an ideal time for this job—particularly if there is a bit of snow on the ground which will indicate the exact track of the wheels of your LAWN BEAUTY SPREADER. It won't burn or wash away. It will get down to the roots where it will do the most good and it will be done and won't get in your hair like Vitamins in April when you have other important things to do. Same goes for seeding.

The details of these operations will be expounded later in this space but for now we suggest you apply 2 (two) lbs. (pounds) per 100 (one hundred) sq. ft. (square feet) of—

- Agricus 10-6-1
- Stadler's 10-6-1 (xxx) or Woodruff's 10-6-4 (Gro-Sod)
- For seed we recommend that you spread 1 (one) lb. (pound) per 200 (two hundred) sq. ft. (square feet) of: Woodruff's TURFMAKER
- Woodruff's CENTRAL STATES
- Woodruff's MILFORD GREEN

(Woodruff's TURFMAKER—our best lawn seed—is now down to \$1.50 per pound.)

Odds Bodkins!
If your bulb shoots are projecting above the ground, be sure to cover them with Eccentrics or HOT CAPS on clear nights when frost is imminent.

Order ROSE BUSHES now! Some of the interesting named varieties are sold out due to the failure of the northwest sources.

Most effective control for BAGWORMS on evergreens is to PICK OFF THE BAGS!! Can you imagine anything more fun than hunting around for bags?

When you read this (if you read it on Feb. 23rd) we will probably have about 6 days of COLD weather.
