Labor Day Pains

Now that the pleasant interlude of summer has almost come to an end, and the non-stop MALLS ON are returning to their various places of learning, we sadly suggest that your attention to that fully implied fact. Being able to personally attend to our affairs, we must resign to rough countryside. As you are forced to a more limited choice of things to do, we suggest to you the idea of spending the day in the fields, and take a break to enjoy the feeling of your surroundings.

GROSNOO
STAGLERS XXX
AGRO

DECOUPLING process to which we add another fine fertilizer...,. Not altogether new, however, since we have always been aware of its potential. After checking the results with some of those who have used it previously, we find that the AGRO with urea fertilizer, has given better, more consistent results than any previous combination.

The disturbing influence of CRAB-GRASS has been felt throughout the area near Yorkville, Il, and east of the Backs Mts. It is certain to have made its presence known in your town. To this time this may be due to all the plants, but before you fertilize and seed, take a quick peek at what’s left out there and if you see any sprouts kill ‘em quick with CRAB-GRASS. Applied at 100 lb. per 1000 sq. ft.

Method: A little explanation is due to me and all concerning grass seed prices.

The most prevalent mixture of seed is made up primarily of quick growing, temporary grasses that may live a year or two. Beyond that point, they begin to deteriorate and need to be renewed. This is not infrequent. The better mixtures are comprised of at least 50% perennial or turf-forming grasses and contain not more than a quarter of the temporary quick-growing grasses. Perennial grasses are easy to grow, produce large quantities of seed, and are usually more priced. Conversely, the perennial turf-forming grasses are not so easy to produce and are more expensive to harvest and clean. This is the reason for the difference in price...
