North Adams: Elizabeth Verna, M. I. 6-6701

Hold Pool-Side Birthday Party for Fred Bigelow

Guests gathered around the pool of the Fred Bigelow home on North Adams road July 22 to join in celebrating Birthday. The party was held in honor of Fred who turned 60 years old. The party was quite festive with music and dancing. Seeds were planted in homestay soil, and the guests enjoyed a delicious meal. The evening ended with everyone having a great time and a lot of laughter.

SUCCESS IS BUILT ON FAILURE

We have made many recommendations for improving soil, lawns, gardens, trees, children, water, fences, dogs, taxes, humidity, etc. However, it is amazing how few reports we ever get back.

We're no too proud to say we have a few comments from people who are very happy with the suggestions we offered... but very few from those who found our suggestions fruitless.

But how are we doing? We have the advice of Cornell University, Purdue University, Michigan State University, and the Oakland and Wayne County Agricultural Agencies, the U.S. Department of Agriculture, the experienced and accredited landscape architects and (unfortunately) the Detroit Free Press, Times and News "garden page" articles and all of your neighbors' comments.

Don't hesitate to criticize constructively as well as compliment us. We cannot possibly have all the problems yourselves, and therefore a good deal of your experience.

WEEDS seem to be the paramount problem at this time. Part of the problem, in fact, is a good deal of it, is caused by weed seeds. This may seem strange to most people although a few are convinced that the weed seeds are definitely a part of the fine lawn seed mixtures we sell.

We're convinced that the weed problem can be reduced enormously by good and sensible maintenance practices.

These practices involve:

1. The application of 6 pounds of nitrogen per acre per each 1,000 square feet. This is accomplished by applying 2 pounds of 10-6-4 or equivalent nitrogen three times during the year (once while you are home and twice while you are away and weeding, should be discouraged). Note that you have followed these suggestions perhaps you can be helped by these tips on weed killing.

2. The timing of the lawn should be done so that the remaining plants are 2 inches high. You should do this (or have it done) frequently enough so that no more than one inch of grass is removed at one time. These short clippings should remain on the lawn and will filter down to the soil to form an irrevocable protectant enrich for the soil. Remember this! LAWNS GROWS WILL BE BENEFITED FROM FREDERICK CUTTINGS.

3. The watering should be done in direct contrast to your drinking habits... one 6 ½ inches of water during 7 days instead of 10 inches. In very warm and dry weather the interval between watering should be increased to 1 or 2 days. Also remember that from each week of dry weather the soil to a depth of 6 ½ inches. Some believe that 1 inch per day is usually sufficient. However, it is not necessary to keep the soil moist at all times. For instance, a week of dry weather may be sufficient.

4. It's possible to have very long, dense grass if you cut the wheat without killing the grass."

Puppeteers' Script Committee

Birmingham Puppeteer script committee members working on new cove for the little stage are (from left) Mrs. Karl Vare, Mrs. John Steiner, Mrs. Charlotte Poulson, and Mrs. Charles Poulson. The shows are presented in the homes for birthday parties, and other occasions.
