Council Lists 6 Top Tips on Winter Driving

Here are six tips from the National Safety Council's Committee on Winter Driving Hazards for motorists who have to drive on ice or snow-covered roads:

1. Be prepared. Winterize your driving techniques and your equipment to avoid accidents, as well as your car.
2. Check your tires. Whether you use regular or snow tires, make sure they're in good condition. Use reinforced tire chains for deep or hard-packed snow, ice, and in emergency traction situations. Even with chains, slow down.
3. Make sure you can see. Keep windshield and windows clear. Make sure that wiper blades, heater and defroster are in proper operating condition. Ventilate to keep the inside of car windows from fogging.
4. Get the feel of the road. As soon as you start out (but away from other cars or hazards) try your brakes occasionally to learn road conditions.
5. Don't follow other cars too closely. Following too closely, a year-round hazard, is especially dangerous in the winter. Keep well back of the vehicle ahead.
6. For stopping quickly, pump your brakes in a series of quick applications. Jamming on the brakes is certain to lock the wheels and throw a car into an uncontrollable skid.

Above all, the Committee on Winter Driving Hazards says, take it easy.

Treated abrasives applied on roads by highway departments makes driving safer and improves braking and acceleration performance 30-65 per cent over bare ice.
