## A Fitting Name

Combination windows received their name because they combine in one permanently installed unit the services of a screen and storm sash. A combination storm window is permanently attached to the house itself, usually outside the conventional window. There are two basic types, the self-storing window, designed to accommodate both glass and screen units in its master frame, and the non-self-storing type, which can accommodate either the glass or screen unit, but not at the same time.

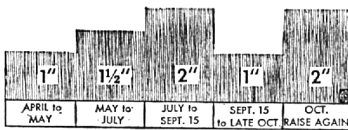

## KEEP GRASS CUT HIGH Your Lawn Is NOT a Putting Green

A closely shaved lawn may look well temporarily, but for most grasses and types of lawn, keep the cut high—never less than 1 inch—unless there are some good reasons for requiring a shorter grass.

An amazing number of homeowners make this mistake and ruin their pretty lawns. Remember—before mowing, inspect your lawn for any debris. Foreign objects such as toys and stones can cause serious damage to the high speed cutting mechanism.

THIS IS TRUE when cutting high grass or weeds. Remember also that whenever the engine is running, the cutter blade is in operation. Take care of your mower and yourself, and never start your engine when the transmission is in the engaged position. As an aid to obtaining uniform greenness, fewer weeds and taller growth of your lawn, both above the ground and below, this cutting guide, used by many professional gardeners, is recommended.

LEAVE GRASS CLIPPINGS on lawn except during wet weather or whenever they are heavy enough to mat. Small clippings form a protective mulch and work into the ground. It has been estimated that the combined length of clippings removed from a single blade of grass during the lengthy mowing season is close to 36 inches.

## Make-up Does It

The difference between paint and varnish goes right back to the make-up of the two materials. Paint is made by grinding pigments in drying oils. Varnish is made by melting transparent resins and mixing the melted resins with similar drying oils, after these oils have been raised to a high temperature. Paint is opaque. Varnish is transparent and is intended to reveal surfaces.
