19 Support One Federal Employee

It takes all the US. Income taxes paid per person by about 19 private industry employees to pay the annual salary of one average civilian worker employed by the Federal government. The Federal government employs 2,000,747 civilian workers. That number again is two days and over 70,000,000 days, and South America.

To keep these workers occupied, the government employs on the labor unions and contracts with 15,000 small businesses of all kinds, in addition to many service organizations.

Not involved to such an extent, the Federal government could presumably the proportions of a large-scale comic strip, U.S. today is worldwide.

We do trust that this inter-service fight between our country and U.S. military organizations will come soon—in case of an emergency, these men will fund their own equipment.

Nature Now

by Lydia King Frohne

Autumn Woods Hold
An Unbroken Cycle

The naturalist experiences a day to day association with plants and animals in their native haunts which is stimulating and satisfying in any season. It is especially true in the fall season, because the shortening days and cooler temperatures make for more time available to spend outdoors.

Once a long waning woodland, filled with the shrill cries of birds that have for months been making the forest floor their home, now becomes a quiet and peaceful place. The leaves are falling, the air is crisp, and the world seems to slow down. It is a time of reflection and renewal.

On the tree, the leaves are changing colors, from green to gold to red. The ground is covered with a blanket of leaves, and the air is filled with the sweet scent of pine. The woods are alive with the sounds of animals, from the chirping of birds to the rustling of leaves. It is a time to be grateful for nature's beauty.

There is a certain type of hunter who peaks his nose for the keen season.

Next time you find someone who would you have the universe revolve around him, hand him this clipping of an article that appeared under science notes in the New York Times.

"There are about 150,000,000 planets in the universe suitable for life, and there are some that are inhabited. In addition, there are some that have life forms that are not related to us."

"The Earth is a planet in our solar system, and it is the only planet in the solar system that can support life."

"In addition, there are some planets that have life forms that are not related to us."

"The Earth is a planet in our solar system, and it is the only planet in the solar system that can support life."

"In addition, there are some planets that have life forms that are not related to us."

"The Earth is a planet in our solar system, and it is the only planet in the solar system that can support life."

"In addition, there are some planets that have life forms that are not related to us."

"The Earth is a planet in our solar system, and it is the only planet in the solar system that can support life."

"In addition, there are some planets that have life forms that are not related to us."

"The Earth is a planet in our solar system, and it is the only planet in the solar system that can support life."

"In addition, there are some planets that have life forms that are not related to us."
