Hole-in-one
 Jim Liddell, 5566 Westwood lane, Birmingham, scored the 170 yard, par 3, 17th hole at Bald Mountain golf club in Lake Orion last Wednesday.
 On the 17th green at the time were Dr. C. F. Desreux of Detroit, Mrs. R. W. Scripps of Lake Orion, and Mrs. G. C. Dillman of Rochester.
 Liddell used a five iron.

Change
 (Continued from Page 8-D)
 APPROXIMATELY 550 acres were added as state lands through exchanges in Iron Range, Mackinac, Au Sable, Alpena and Thunder Bay River state forests.
 Another exchange, of less than one acre, was approved for Traverse City state park. It will permit completion of a fencing project now underway along the east side of the park and will also correct a trespassing problem.
 The Blue Lakes ranch exchange, held over from last month's meeting, was tabled until the commission's October session. The postponement will enable department workers to conduct further surveys on the lands involved.
 Department director Gerald E. Eddy told commissioners that the proposed mineral rights exchange involving state and federal lands in Swan Creek wildlife experiment station has been stryimed, at least temporarily. Bureau of land management officials informed Eddy they do not have authority to make the transaction and that congressional action is needed.

DO IT YOURSELF

Since the killing of CRABGRASS involves, in most instances, a repeated application of the various materials used for this purpose, it will cost less if you do it yourself.

The application of a material that will kill crabgrass with one shot will probably kill the grass. There is an old cliché that where crabgrass is, grass isn't. This is the bunk (unless you believe it) and of course, when you try a heavy dose you will find there is no grass there. You killed it.

The materials we recommend for application right now are:—

CRABNOT SPECIAL—Potassium Cyanate powder to be mixed with water and sprayed on—not the way YOU want to do it—but one gallon to 100 sq. ft. It also kills broad-leaved weeds.

BONIDE'S DISOMAR—Same method as above.

ORTHO'S AMA CRABGRASS KILLER—A liquid whose ratio of application depends on the temperature.

DUPONT'S CRABGRASS KILLER—Same material as Ortho's.

VAUGHAN'S K.O.—A combination of SODAR and 2,4-D, to be applied by sprayer.

We believe CRABNOT SPECIAL and K.O. are the best of the two types. Whenever you use a liquid spray use DUPONT'S SPREADER STICKER with it.

FERTILIZING TREES:—
 It is better not to do it at all at this time of year. The best time is in the spring, or, for deciduous trees, after the leaves fall in the fall.

Organic matter and/or complete chemical fertilizers such as 10-6-4 are preferable.

RESEEDING THE LAWN:—
 The spots dead from fungus or other causes may be fixed up at any time—but if you wait until September nature will help you and eliminate the need of top dressing with peat moss and watering every day.

Virgima Bluebell (Mertensia) Divide and move this month as the roots are practically dormant.

Bleeding Heart foliage which has died should be cut off and burned.

Heavenly Blue Morning glory: Cut the buds the night before they are to open and use them for a breakfast table arrangement.

Peonies: A cupful of Gard-N-Gro or Agrico for the garden should be lightly cultivated in around each plant.

Hollyhocks: As soon as they have finished blooming cut them down and burn the debris. Spray any seedlings with BORDEAUX fungicide.

Iris: Continue to divide and plant. Japanese types dislike lime and should be planted deeper.

Gladoli: When you cut the blooms leave a good amount of foliage for the development of a new corn. Use a sharp knife and make a slanting cut.

Cabbage: If they begin to crack, bend them over to break the root on one side.

Vegetables: Water with 1 inch once a week. (One inch of water on the surface).

Muskmelons & Watermelons: Put a thin board under each plant and decay and wireworms will be thwarted.

Squash: Put shingles close to the vine and destroy the pests under them each morning.

Eunonymers Vines: The scale moves this month. If not sprayed they may die. Use MALATHION.

Lawn Insects: Spray with 72% Chlordane.

Next week's ad will be done by someone else.

Economy

The circumstances of our growth since 1878 have all contributed to an operation characterized by economy. Today you are offered a printing service that provides complete facilities "under one roof" featuring quality, fast production and personal interest at prices that meet economy budgets. As one of the 10 largest printing plants in the Detroit area, you can enjoy "bigness" of facilities without the penalty of "bigness" of cost.

The most important reason for this price economy at The Averill Press came about some 30 years ago when we expanded our operation into competition with Detroit printers. Prior to that we had restricted our sales effort within Oakland County. In expanding to compete with 600 Detroit printers, we found our suburban location had several handicaps.

In the first place was the impression that we were too far removed (a distance concept) from the Detroit buyer. To offset this we emphasized (1) low prices (2) fast service (3) quality (4) personal interest. To translate these inducements into fact it was necessary to gear our operation into a completeness of facility. This was accomplished by creating our own composing room, bindery, plate making, mailing service, etc.

As a result, you will find it possible to place an order with us and have it completely handled in our plant without intermediary steps or suppliers involved; have the schedule pre-determined and controlled in one phase; avoid the chain of "mark-ups" because you buy at "manufacturer's prices" rather than "retail prices".

Although we are now fully accepted as a "Detroit" printer, the tradition of meeting the competition (service, quality, economy, etc.) still prevail with us.

That you can buy with complete confidence with us is well illustrated by the fact that over 50% of our work is ordered without quotation.

We intend to keep it that way.
