What many people don't know about crabgrass

1. Crabgrass grows only from seed. The dead crabgrass plants you see now will disintegrate and disappear—leaving ugly bare patches in your lawn. Crabgrass is an annual. It re-seeds itself at the end of each summer.

2. Last year's seed is in the ground. Crabgrass is one of nature's most prolific weeds. Right now, literally billions of crabgrass seeds are waiting in most lawns for spring warmth to germinate. Then the vicious cycle starts all over again.

3. You can keep it from coming up. A single winter application of HALTS with the accurate Scotts Spreader creates an invisible barrier against crabgrass. HALTS lies in wait, kills crabgrass as it sprouts. (HALTS will not harm good grass—doesn't interfere with seeding.)
