From 15 cents up **CLOSE-OUT DEPARTMENT** Discontinued but new and Guaranteed

Minivac 601

THIS TEACHER DOESN'T EAT APPLES . . . but it does teach concepts and principles that many teachers who do eat apples cannot.

This teacher is MINIVAC 601, an electronic digital computer simulator designed to introduce teenagers and adults . . . anyone with an inquiring mind . . . to the fascinating world of machines that think.

MINIVAC 601 is a real digital computer . . . a small brother to the giant electronic brains that are predicting elections and putting man into space. It can perform the basic operations of large computers. It can learn, remember, calculate, solve logical problems and make decisions. But most important, it can illustrate how complex computer systems perform these same functions, and indicate the potentialities and limitations of intelligent machines.

Developed as a private project by Dr. Claude E. Shannon, now Donner Professor of Science at the Massachusetts Institute of Technology, MINIVAC simulates computer applications in business, science, politics, and the military. It demonstrates how computers read printed material, provide automatic control, and duplicate many attributes of intelligent behavior. It can recognize geometric forms, learn to solve simple mazes, and translate German sentences into English. It will, of course, play tic tac toe with you and never lose (although it may settle for a tie occasionally).

No previous knowledge of mathematics or electronics is needed to use MINIVAC. Six comprehensive manuals accompanying the computer guide the MINIVAC user in his discovery of machines that think.
