

### Vacation, Here We Come

It's time for summer vacations again and the John Penningman family—tennis rackets, suitcase, baseball glove and all—are set to start on their trip. From left they are David,

Mrs. Penningman, Penningman, Andrew and Donald. The Penningmans live at 1217 Washington Street, Birmingham.

### Let's Sit Down 'n Eat; It's Strawberry Time

Michigan's strawberry season is here and it's about two weeks earlier than last year. Fruit is grown on about 10,500 acres which represents about \$7 million to Michigan producers. About 68 per cent of the crop is sold on the fresh market and 32 percent for processing, according to 1960 figures. Sixty per cent of Michigan's strawberries are grown in Berrien and Van Buren counties in the southwestern part of the state. Robinson, premier, and earliden varieties total about 50 per cent of the crop, with Robinson making up about 50 per cent of the acreage. It is a large berry with full red color and is mild in flavor. It is often deeply grooved and has a pale, often hollow, center. Its best use is for fresh eating.

**PREMIER MAKES** up about 20 per cent of the acreage. It is preferred by processors because it holds its shape in jam and for freezing. It is smaller than the Robinson, and is red all the way through with a superior flavor. Earliden totals about 10 of the acreage. It is first to ripen and processes well. Its red color extends all the way through the berry.

**ONE QUART** equals five half-cup servings; two quarts equals a pint of preserves or three pints.

Near Quanton School. \$17,900. Charming ranch painted yellow, wonderful for growing children on a tree-shaded lane, free from traffic. Carefully maintained! Full basement—floor completely tiled. Large screened porch. 3 Bedrooms, some Carpeting. Recreation room. Walk to the Chesterfield shops and Churches.

A 4 Bedroom 3 1/2 bath English Brick in the Country. Screened porch for summer enjoyment—plus a patio. Two car attached garage—plus a tool shed and carport. Beautiful landscaping. Horses allowed with ample grounds for riding. Bloomfield Hills Schools. \$34,250.

## HOMEMAKING

### Knits a Good Solution To Luggage Problems

What to wear on the way, and once you're there on a suitcase Summer vacation, is always a ticklish problem, but today's modern knits offer versatile solutions designed with limited luggage trips in mind.

The coming of age of synthetics, and the creation of new knits from neocold fibers, have greatly enhanced the wardrobe of the Spring-Summer traveler, adding elegance where there once was only practicality, versatility where the single-purpose costume was formerly the order.

The three-piece outfit by Dalton of America (left) earns its right to travel with any American woman because of its perfect blend of elegant design and wash and wearability. The addition of a mohair coat, jacket, makes the wonderful, fully-cold two-piece dress an around the clock choice. Flowing pleats in the skirt, sleeveless, buttoned top, and jacket trimming in the dress material distinguish the stylish drapery outfit.

Linens, the passport to Summer luxury, is knitted by Dalton of America (right) into a easy and light-hearted outfit that speaks the words the woman wants to hear in Summer—fashion, coolness, and cross-resistance. Dalton tops a straight skirt with a horizontally striped sleeveless over-blouse for a delightful outfit for day-wear, perfect for travel. Evening will be no less elegant with the addition of the light linen coat/jacket, a

### Air Conditioner Can Use Water From Your Well

Well water is usually from 30 to 40 degrees cooler than room temperature on a hot summer day. For this reason, and because of what is known as a heat pump, air conditioning by means of well water is both practical and inexpensive. The equipment required for this type of cooling installation can be installed by any experienced plumbing and heating contractor. It consists of a special pump which brings the water from the well, a filter, a fan, cooling coils, automatic controls and the usual duct material distinguish the stylish drapery outfit.

**THE HEART** of the system is the pump which draws the cool water into coils, then discharges it as its usefulness is used. Air to be cooled is drawn from the room through ducts and forced through a filter which removes dust, dirt and pollen. A powerful striped sleeveless over-blouse for a delightful outfit for day-wear, perfect for travel. Evening will be no less elegant with the addition of the light linen coat/jacket, a

### Coeds Eligible For 4-H Club Scholarships

Nine college scholarships valued at \$6,300 await coeds planning to major in home economics during their junior and senior years. Only present or former 4-H Club members enrolled in an accredited college in the fall of 1962 are eligible. The 1962 recipients will be announced during National 4-H Congress in November, according to the National 4-H Service Committee.

**APPLICATIONS** for the scholarships are made through the state 4-H Club leader. One candidate will be selected from the state to compete nationally for a home economics scholarship, a National Committee spokesman said.

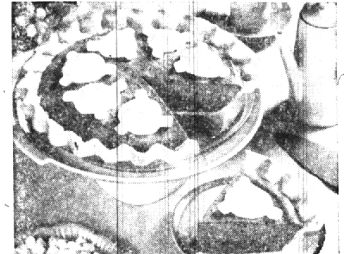

A breakdown of the nine scholarships and the sponsors is as follows: Two \$800 scholarships given by Sperry and Hutchinson Co., New York; two by Whirlpool Foundation of the Whirlpool Corp., Benton Harbor, Mich.; three for \$500 each given by Pyrofax Gas Corp., New York.

Eligible applicants must submit to the county extension agent, a college scholastic record, a statement of interest in home economics, an explanation of need for financial assistance and a report highlighting their 4-H accomplishments.

Annually more than \$122,000 in college scholarships and fellowships are provided by business and foundations through the National 4-H Service Committee.

then forced back to the room through ducts and grilles.

**OPERATION** of the cooling system is automatically controlled by a thermostat, just as your heating system is.

### Mint Chiffon Pie Tasty Light Spring Dessert

You won't want to pass mints with coffee when you serve this pie.

For mints are an essential ingredient of the chiffon pie—add sugar, continue beating until stiff and glossy. Fold into gelatin mixture.

Like all true chiffon pies, the filling is basically a custard with gelatin added to help "set" it. Beat whites with sweetened whipped cream and mints.

**BEAT THE REAL surprise** lies in the discovery that a small package of after-dinner mints provides the cooling, softening flavor captured in the mints. It is so to do.

The mints are simply dissolved in the hot milk used in making the custard. A little cream food coloring intensifies the attractive color of the pie. And tubs of whipped cream and more mints search it.

### Water Supply Protects Home Against Fire

How prepared would you be if a fire should start in your home? A quick telephone call would bring adjacent firefighters to the scene but what would you do until they arrived? Most people run to the kitchen and fill pitchers and buckets with water but these meager efforts are too often in vain. How about keeping garden hoses attached to outside faucets so they can be used quickly. Extending water piping in your home to strategic points all around the outside of the house is another possibility.

**WITH AS MANY** as three hoses attached to three different faucets, the odds are good that you will be able to control or extinguish a spreading fire in your home no matter where it starts.

The extra faucets will also provide the family with many other conveniences throughout the year. Faucets in the patio area (providing both hot and cold water) make summertime meals and refreshments outdoors a real luxury.

## Buying Plants from Greenhouse Often Better Than New Planting

While the dyed-in-the-wood gardener prefers always to grow his own plants of annuals from seeds, so that he can grow the exact varieties he wishes, it sometimes happens that circumstances prevent. Then it may be necessary to buy plants already started by a local greenhouse. Such plants are usually available in flats or similar containers of treated paper, containing from 72 to a mere dozen plants.

depend on the amount of space you wish to fill, but whether you buy few plants or many, the pitfalls are the same. **PLANTS THAT** have grown large and tall are the kind to avoid. They can be depended on to wilt when you transplant them. Look for short, stocky plants and buy those, whether you are buying vegetables or flowers. Avoid buying plants in full bloom—they will have a severe setback when transplanted. Instead, look for a container in which just one plant has started to flower. If you are buying flowers, this one will tell you the color of the variety in the container. Unless plants are available in peat, clay, or paper pots, and can thus be moved without root loss, all flowers and buds showing color should be nipped off with thumb and finger before transplanting. This greatly increases the chances of the plant to re-establish quickly.

Naturally the size container or number of plants you buy will

Never buy a large flat in which plants are crowded and which gives you "squares for your money". Actually, it gives you less for your money because plants in it are too crowded for good root growth and many of them will die. When planted too close in flats, allowed to wilt because they are restricted soil of a pot or flat, plants are not good buys and don't be watered, crown too long in the
