NATURE NOW

Spider's Web Silk Comes From Tubes at Spinnerets

ONCE THE WEB is constructed, spiders have various ways of operating their traps. Some rest in a nearby feebly web connected with their job by means of a tenuous line which signals the presence of a victim...

Mrs. Freese has a long thread which is wind-borne, carrying them to new feeding grounds.

FEAR OF SPIDERS, like fear of snakes, is mostly unjustified. The black widow, whose female carries a red hourglass on the underside of her shiny black body, is only one of our more dangerous species...

OUR LARGE and brightly colored "orb weavers" spin the most intricate of webs. Typically, these consist of 26 radial and static threads and 12 transverse and elastic ones holding drops of viscous fluid to entrap the prey.

THE MOST spectacular of water-dwelling insects are the damselflies, which spend their entire lives in aquatic environments. They are highly adapted for life in water, with long, jointed legs for swimming and a flattened body that allows them to glide through the water with ease.

THE WINSTON collection is said to be the most representative of futurism of any private collection in the country.

THE WINSTONS have three married children, a son and two daughters, and nine grandchildren.

IT WAS evident that Ruth Carr and Jean Settle of wardrobe had paid strict attention to detail, and Barbara Haynes and Ann Geiger, working in make-up, were successful in giving the apparitions a ghostly but not ghastly look.
