Small boys' polished cotton. Black, olive green, beige, blue, antelope. Big boys' chinos printed in plaid. Slim or reg.

HUSKIES, 6-16......1.97

ONCE YOUR allergies are clearly identified, it may develop that moving to another area could provide some help. But in general, the "change of climate" idea is greatly overrated as far as curative effects are concerned. There is also a good chance your physician can immunize you against some of your allergies.

This column is presented here as a public service by the Oakland County Medical Society and The Birmingham Ecentric. It will be written by "465 physicians in Oakland County" who are members of the society. Questions should be addressed to the Oakland County Medical Society, 346 Park, Birmingham. Questions must be of a general nature, as no effort will be made toward diagnosis or treatment in specific cases.

FLEEING ALLERGIES IS RISKY

FLEEING ALLERGIES IS RISKY
Q—I have several allergies, and a friend has suggested that I need a change of climate. What part of the country is best?
A—Since you mentioned "several" allergies, we must presume more is involved than sensitivity to a plant such as ragweed. This probably means that going somewhere may not be the entire answer.
For example, there are regions where little or no ragweed is found, but if you are also sensitive to house dust we believe you will encounter this no matter where you go.
It would be extremely unwise to go anywhere, with the expectation of being helped, before checking thoroughly with your saysician.

HISTAMINE EXPLAINED

Q—What is histamine? How do the antihistamine drugs work, and must they be continued over long periods once a person starta taking them?

A—Histamine is a chemical that is present in all tissues. Needed to insure normal functions, its two principal uses are stimulation of stomach secretion and causing a widening of capillaries as tissues require more blood. Problems develop when excessive amounts of histafelders reaction, as in the case steeper section, as in the case issues. This may be a defense reaction, as in the case issues. This may be a defense reaction, as in the case issues. This may be a fertile to the steeper section of capillaries, and the body areas affected become overfilled with fluid. This is what causes hives, seen so commonly in allergic states. Allergies are probably the most common causes of excessive production of histamine.

ANTIHISTAMINE DRUGS neutralize the extra histamine and the underlying cause can be corrected. The same tendency to go through the "shock" period, with excessive production of histamine, will be seen whenever the individual is exposed to the responsible agent—a pollen, a certain food, or perhaps some drug. If such exposures can be avoided, there will be no need to continue taking antihistamine drugs. Also, in some cases, the physician can decrease sensibility to histamine by giving the patient very small injections of histamine, gradually increasing the amounts until tolerance has developed.

graduany developed.

Membership Drive

Happenings (Continued from 1-B) 15 YEARS AGO Peb. 17, 1949 If the State Highway Department the State Highway Department the State Highway Department the State Highway Department the engineering details, three additional traffic signals will be installed on Hunter and South Woodward, between Maple and 14 Woodward, between Maple and 18-10 progressive traffic invovement on US-10 and give more safety to tempting to cross the super-highway at present ly unprotected intersections. One signal would be located midway between Maple and Lincoln, a second about halfway between Lincoln and 14 Mile, and the third at 14 Mile. Way was opened Monday night for the immediate development of Maple arenue, east of Hunter, as a retail shopping center when the city commission set March 14 as the hearing date on the rezoning of property to Business A. It presently is zoned for a single family. The Birmingham baskehall team has a chance to win the Eastern Michigan League cage crown tomorrow night in a game with Port Huron on the Big Reds' home floor. Birmingham is in first place, aided by recent upsets scored by East Detroit and Hazel Park against Ferndale and Port Huron which put the Maples on top after a week's tie with Ferndale. Virusea are the tiniést particles that can be reproduced by nature. Like genes, they are made up of the two basic compounds of life; also contain a little fat and sugar. They come in many shapes and sizes, round rod-shaped, long, short, cometimes without. A virus may contain as many as a thousand molecules, or it may consist of only one.
