RID LAWN OF CRABGRASS
Crabgrass was widespread last year. Many thousands of additional seeds were produced which will germinate this summer doubling the amount of infestation. If this reproducing process is not stopped serious lawn damage may result. I recommend a crabgrass pre-emergence treatment be applied this spring. One application gives effective control all summer long. The cost is less than you can do it yourself. Additional lawn services include spring fertilizing, weed, clover and chickweed killing.
